

GREEN TOGETHER

2023 PROGRESS REPORT ON IMPLEMENTATION OF THE
TRANSFORMATIVE CLIMATE COMMUNITIES PROGRAM GRANT

UCLA

Luskin Center
for Innovation

Prepared by the UCLA Luskin Center for Innovation

Principal Investigator: V. Kelly Turner, Ph.D.

Researchers and Authors: Elena Hernández, Jason Karpman, Samantha Astudillo, Lauren Dunlap, and Bo Liu

Editors: Colleen Callahan and Mara Elana Burstein

Prepared for

California Strategic Growth Council (Contract Number: SGC19111) and Community Partners (Contract Number: 20200951)

Report Period

Green Together award date (December 2018) through month 25 of implementation (June 2022)

Acknowledgments

We thank the California Strategic Growth Council (SGC) for dedicating resources to a third-party evaluation of Transformative Climate Communities Program (TCC) investments in Pacoima. In particular, we thank Rebecca Avilés, Bo Chung, Amar Azucena Cid, Jessica Ison, Anna Jane Jones, Jennifer Kim, Lynn von Koch-Liebert, Saharnaz Mirzazad, Sarah Newsham, Gerard Rivero, and Sophie Young for their commitment to our work, and for their attention to our many informational requests.

Along with SGC, we'd also like to thank our partners at the California Department of Conservation — namely Jacob Byrne, Nicole Cartwright, Julia Estrada, Neel Kasliwal, Sydney Mathis, Brian Newman-Lindsay, and Brendan Pipkin — for reviewing the accuracy of TCC background information provided in this report.

In addition to our state partners, we'd also like to thank the Green Together collaborative for entrusting the evaluation of their initiative to the UCLA Luskin Center for Innovation and its staff. In particular, Dora Fietze-Armenta, Robin Mark, Veronica Padilla, Jasmine Silva, Sophie Sylla, Barbara Velasco, and Thomas Yee have been instrumental in facilitating introductions between the evaluation team and local stakeholders. And a big thank you to all of the Green Together project partners for sharing so much primary data with the evaluation team, as well as reviewing the content within this report for accuracy. We also owe a great deal of gratitude to Nick Cuccia for his copy editing and design support.

We would also like to acknowledge former staff at the UCLA Luskin Center for Innovation who have substantively contributed to the center's approach to evaluating TCC investments across sites: Erin Coutts, J.R. DeShazo, Michelle Einstein, Silvia R. González, Lolly Lim, Britta McOmer, and Kelly Trumbull. Thank you to Evelin Estrada Ramirez and Dinan Guan, graduate student researchers, for their support. Similarly, we extend our thanks to our former colleagues at the UC Berkeley Center for Resource Efficient Communities who consulted in the original TCC evaluation plan: William Eisenstein and Zoe Elizabeth. Moreover, we would like to thank Bruce Mirken, Alvaro Sanchez, and Emi Wang at the Greenlining Institute for their thoughtful input on how to structure the content contained in this report.

Finally and importantly, as a land grant institution, UCLA, and the authors of this report, also acknowledge the Gabrielino-Tongva peoples as the traditional land caretakers of Tovaangar (Los Angeles basin, Southern Channel Islands), and recognize that their displacement has enabled the flourishing of UCLA.

Disclaimer

The UCLA Luskin Center for Innovation appreciates the contributions of the aforementioned agencies. This report, however, does not necessarily reflect their views nor does it serve as an endorsement of findings. Any errors are those of the authors.

EXECUTIVE SUMMARY

THE TRANSFORMATIVE CLIMATE COMMUNITIES PROGRAM

(TCC) is an innovative investment in community-scale climate action, with potentially broad implications. Launched in 2017 by the California State Legislature, TCC funds the implementation of neighborhood-level transformative plans that include multiple coordinated projects to reduce greenhouse gas (GHG) emissions. The program is also designed to provide an array of local economic, environmental, and health benefits to disadvantaged communities, while minimizing the risk of displacement. TCC empowers the communities most impacted by pollution to choose their own goals, strategies, and projects to enact transformational change — all with data-driven milestones and measurable outcomes.

The California Strategic Growth Council (SGC) serves as the lead administrator of TCC. At the time of this report, it had awarded 11 TCC implementation grants to 11 communities across the state (ranging from \$9.1 million to \$66.5 million per site). Additionally, SGC has awarded 25 TCC planning grants to communities that are in the early stages of forming a coalition to address local climate action goals (ranging from \$94,000 to \$300,000 per site). The state legislature has allocated funding to distribute two additional rounds of TCC grants.¹

The UCLA Luskin Center for Innovation (LCI) serves as the lead evaluator in five communities that have received TCC implementation grants: all three Round 1 sites (Fresno, Ontario, and Watts), one Round 2 site (Northeast San Fernando Valley), and one Round 3 site (Stockton). LCI researchers are working with these communities to document their progress and evaluate the impacts of TCC investments.

This progress report is the third in a series of five annual reports that will provide an overview of the funded projects, key accomplishments, and estimated benefits of TCC activities in the Northeast San Fernando Valley, collectively referred to as Green Together.² This specific report documents progress through the end of FY 2021-2022, which overlaps with about 42 months of program implementation for leveraged projects (December 2018 to June 2022), almost 25 months of implementation for funded projects (May 2020 through June 2022), and three years of the COVID-19 pandemic. Leveraged projects were allowed to begin when the grant was awarded; funded projects could begin at the time of grant execution. Project partners' responses to the pandemic are also highlighted throughout the report.

¹For the most current information about TCC rounds, both current and future, visit: <https://sgc.ca.gov/programs/tcc/>

²For annual reports that LCI has produced for other TCC sites, visit: <https://innovation.luskin.ucla.edu/tracking-groundbreaking-climate-action/>

The Northeast Valley Today

Located in the Northeast San Fernando Valley (NE Valley) in the City of Los Angeles, the Green Together project area includes parts of the Pacoima and Sun Valley neighborhoods. The area is a vibrant, predominantly Latino immigrant community situated under the flight path of Whiteman Airport, at the intersection of multiple freeways, transportation corridors, and other industries that are a significant source of noise, greenhouse gas (GHG) emissions, and air pollution. Despite decades of local grassroots activism to address community needs, residents continue to face many economic and health challenges, including a high pollution burden, high rates of poverty and obesity, and early stages of residential and commercial gentrification. Climate change could exacerbate these challenges.

Green Together

The roots for TCC in the NE Valley were laid in 2007, when a coalition of community residents, public agencies, and environmental groups worked to develop a collaborative process to reimagine a four-mile stretch of Pacoima Wash, a concrete channelized tributary of the Los Angeles River. Led by Pacoima Beautiful, the only environmental justice

organization in the NE Valley, they held public workshops to collaboratively select projects to address key issues identified by the community. These efforts culminated with the 2011 Pacoima Wash Vision Plan. Revitalization of the wash began in 2015 through the Pacoima Urban Greening Vision Plan with a grant from the Strategic Growth Council. The partnerships and goals borne out of these plans, as well as Pacoima Beautiful's 20 years of grassroots organizing, laid the groundwork for Green Together's TCC proposal.

In late 2018, Green Together was selected by the Strategic Growth Council for a TCC grant of \$23 million to bring its vision of a "neighborhood that is safe, green, socially inclusive and resilient to climate change" to fruition. Green Together also committed to leveraging at least \$38.7 million in outside funds. Along with previously funded sites, Green Together will serve as one of the first five communities in the country to pilot a community-led, multibenefit and place-based climate change mitigation program that specifically targets the needs of low-income households.

Projects

Green Together includes a total of 12 projects, three of which are fully funded by TCC dollars, six are funded by leveraged dollars, and three use a mix of funded and leverage funds to meet grant requirements. The TCC-funded and leveraged projects work synergistically to achieve the

broad goals of TCC. The funded projects are consolidated into six distinct project types (summarized below). The funded and leveraged projects are mapped in **Figure 1** (where applicable).

TCC-funded Projects

Active Transportation — Funds two distinct projects focused on pedestrian improvements and creating three mobility hubs. Street enhancements include 900 feet of new sidewalks, five new wayfinding signs, 10 ramps, and three high-visibility crosswalks on Herrick and Haddon avenues. The mobility hubs include bike share infrastructure, bike parking, seating, wayfinding signage and public art. These projects will reduce car travel by making alternative travel options safer and more convenient.*

Rooftop Solar — Leverages TCC funds and private dollars to install approximately 669 kilowatts of solar photovoltaic systems on 175 single-family homes in the project area. The project will enhance local generation of renewable energy and lower energy costs for property owners. The installation project is also part of the workforce development plan training activities that will create a pipeline of future local jobs and a thriving solar workforce in the NE Valley.

Transit Operations — Leverages TCC funds and other public dollars to electrify the Los Angeles Department of Transportation DASH bus fleet that travels through the project area, with 14 new battery-electric buses and seven electric chargers. It couples these investments with increases to the frequency of bus service with a new E-DASH route. The investment is aimed at improving transit ridership and reducing vehicle miles traveled with transit routes that better respond to the community's needs.

Urban Greening — Community-driven design process and renovation of the existing 6.8-acre David M. Gonzalez Park. Project renovations include 95 shade trees; new walking paths; and over an acre of new stormwater management landscapes, including drought-tolerant vegetation, and a learning garden with native plants and bioswales. The project will result in the sequestration of carbon through maturing trees and provide shading benefits.

Low-Carbon Transportation — The implementation of electric vehicle charging infrastructure and air quality monitoring at the three mobility hubs described above. The low-carbon transportation project fills a critical mobility gap and will increase residents' access to services and amenities without producing GHG emissions from tailpipe emissions.

Urban & Community Forestry — Leverages TCC funds and other public funds to plant and maintain 2,000 new trees, focusing on providing shade for commercial and residential properties to reduce air conditioning usage. As the trees mature, they will sequester carbon and shade nearby buildings, which should reduce the demand for electricity for cooling purposes. The additional tree coverage will also reduce the urban heat island effect on hot days and absorb stormwater on rainy days.

* As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

Leveraged Projects

Cool Roof Retrofits — Leverages funds to install 35 cool roofs on residential homes in the project area. The project will reduce interior temperatures during periods of extreme heat. Similar to the rooftop solar project, cool roof retrofits will lower energy and utility costs for property owners.

Community Resiliency Center — Leverages local public funds to develop community resiliency infrastructure by renovating David M. Gonzales Recreation Center with a 40kW solar photovoltaic system and approximately 40kW of energy storage, and 2-4 electric vehicle service equipment charging stations.

Bradley Green Alley & Plaza Renovation — Transforms 0.7 acres of alley and plaza space near a main commercial corridor and public housing with 800 feet of alley and street improvement, street lights, seating, shade, 1,000 vines and shrubs, 46 trees, and a stormwater capture system to infiltrate up to 5-acre feet of water annually. The project supports multimodal travel in the area and supplements water supply efforts for the City of Los Angeles.

East San Fernando Valley Transit Corridor — Leverages partnership with Los Angeles County Metropolitan Transportation Authority that provides light rail transit service that will pass through the project area. Three stops are planned for the area. Project components include design documents, community engagement, and first/last mile station area plans.

Fernangeles Park Stormwater Capture — Leverages partnership with public agencies to install a 1.6-acre underground infiltration gallery at Fernangeles Park. Features include a catch basin as well as bioswales and park improvements. The project will supplement local water supplies.

Green Streets — Funds the installation of green stormwater infrastructure design and construction in partnership with public agencies. Project features include bioswales, drywells, curb inlets, vegetation, and tree planting. The project supports regional efforts to capture and infiltrate water and ensure a source of local water supply.

Transformative Plans

TCC is unique from other state-funded GHG-reduction programs because it requires grantees to develop three transformative plans to maximize the benefits of the previously described projects and to minimize unintended harms. Specifically, grantees were required to develop a community engagement plan, workforce development plan, and displacement avoidance plan.

Respectively, these three plans are designed to ensure that TCC investments reflect the community’s vision and goals, bring economic opportunities to low-income households, and minimize the risk of gentrification and displacement of existing residents and businesses. In the case of Green Together, these three plans have been adapted in the following ways:

Community Engagement Plan

- » **Formalize** resident participation in TCC grant governance through the establishment of a Leadership Council that will provide feedback on key decisions to the Steering Committee. The full Council will include:
 - 2 residents
 - 2 business leaders
 - 2 local nonprofits
 - 2 anchor institutions
 - 2 community leaders
 - 1 local elected official
- » **Leverage** existing channels of engagement to solicit resident input:
 - Provide project updates at a minimum of 25 community meetings and focus groups
 - Update social media, website, and informational kiosk
- » **Conduct** outreach to connect residents with TCC projects, including:
 - Hold at least one to three charettes for each major program and infrastructure project
 - Outreach to a minimum of 100 homes and businesses in the project area

Workforce Development Plan

- » **Establish** the Green Together Resource Center, a hub for workforce development activities
- » **Connect** youth and residents with training and educational opportunities that provide them with new skills in solar, construction and urban forestry
- » **Place** residents in employment opportunities on TCC and leveraged projects, including:
 - Los Angeles Conservation Corps provide 50 opportunity paid interns, a minimum of 15-20 of which will be project area residents
 - GRID Alternatives accept 96 adult trainees, 58 of which will be project area residents

Displacement Avoidance Plan

- » **Incentivize** locally relevant affordable housing by understanding barriers and potential solutions to building accessory dwelling units
- » **Protect** tenure of existing residents through a financial assistance education program
 - Host three Tenant Rights workshops
- » **Retain** local small business and artist community by conducting outreach and providing technical assistance
 - Host five annual workshops related to small business development

Project Area

The Green Together project area was configured to bring investment to some of the state's most disadvantaged neighborhoods. The majority of census tracts within the project boundary area is defined as disadvantaged according to CalEnviroScreen 3.0, with about 35% of the project area ranking within the top 5%. The project area boundary was also drawn to connect key assets within those census

tracts. Those assets include: Pacoima City Hall, six popular bus routes, five community centers, community murals along Van Nuys and Bradley alleyway, the first shared multi-modal alleyway. **Figure 1** shows where TCC-funded projects and leveraged projects are located within the project area. See **Appendix 1 (page 71)** for a more detailed project map.

Figure 1. Project Area Map With Locations of Projects*

*See the previous pages for information about what each project icon represents. This map does not include sitewide projects or plans (e.g., community engagement) or projects for which locations have not yet been determined (e.g., rooftop solar installations). Note: Project boundary has been modified since April 2023. Figure credit: UCLA Luskin Center for Innovation

Anticipated Benefits

Green Together is slated to bring a number of benefits to residents of the TCC project area. The infographic below highlights some of these benefits, grouped by indicator type. This list includes outputs, outcomes, and impacts from TCC-funded projects and does *not* include those from leveraged projects. Project outputs refer to the tangible goods and services that Green Together will deliver

by the end of project implementation. These outputs are expected to result in many positive outcomes and impacts. Outcomes refer to changes in stakeholder knowledge, attitudes, skills, behaviors, practices, or decisions, while impacts refer to changes in the environmental or human conditions that align with the objectives and goals of TCC.

Harder to quantify, but nevertheless important, is the leadership and collaboration capacity that will be created in the NE Valley during the TCC implementation process. This capacity could lay the foundation for many other funding and action-oriented opportunities that leverage the TCC

projects and plans to bring additional environmental, health, and economic benefits to the NE Valley. In addition, lessons learned and best practices from Green Together could inform local climate action and investments well beyond Pacoima and Sun Valley.

Cumulative Accomplishments

Green Together Collaborative hosting the Prende el Sol event in October 2022. Photo credit: Pacoima Beautiful

Much has happened after the announcement of Green Together's TCC award in December 2018. From then through the close of the FY 2021-2022 (June 30, 2022), project partners have made considerable progress toward implementing an ambitious climate action initiative.

Key accomplishments of Green Together project partners are described in this section according to the phase in which they occurred. Specifically, accomplishments are divided between: (a) post-award consultation, a period of planning and preparation between the award announcement and grant execution; and (b) grant implementation, which formally began in May 2020 with the formal execution of the grant agreement.

Post-Award Consultation (January 2019 – May 2020)

Formalized Partnerships and a Governance Structure

During the post-award consultation phase, Green Together partners participated in a comprehensive review of all projects and transformative plans to ensure that they complied with TCC guidelines and that requisite partnerships were in place to successfully carry them out. Key deliverables from this process included: an executed grant agreement with clearly defined work plans and roles for each partner as well as an evaluation plan in collaboration with LCI to measure the effects of TCC investment. Green Together has formed a number of partnerships in

the community to facilitate TCC implementation. Many partnerships existed before the TCC application process and have been institutionalized through the establishment of the collaborative stakeholder structure for coordinating grant governance, known as the Leadership Council and Green Together Steering Committee (see **Appendix 3 page 75**) for a full list of members).

Grant Implementation (May 2020 – June 2022)

Strengthened Community Capacity

Community capacity is broadly defined as the ability of local communities to develop, implement, and sustain their own solutions to societal challenges, including but not limited to climate change. Through investment in both physical and social capital, TCC has strengthened community capacity in the NE Valley, as evidenced by several case studies that can be found later in this report. For example, the Leadership Council has created a stronger coalition of community organizers who are working to positively impact the project area, see **page 28** for the perspectives of two members. Additionally, through Green Together's Clean Air Ambassador program, there have been 28 individuals across generations trained on air quality monitoring, thereby empowering them to take on greater roles of public influence in the environmental justice space. To learn more about three Clean Air Ambassadors and their experiences, see **page 34**.

Increased Urban Tree Cover

With respect to urban forestry efforts, project partners have planted 708 trees in the NE Valley, adding vegetation where there was previously concrete. Once the trees mature, they will increase shade cover, thereby improving thermal conform during extreme heat events. Additionally, leveraged funds have also increased tree canopy within the project area. Partners planted an additional 46 trees at Bradley Alley Green Plaza, transforming it into an open and shaded public space for the NE Valley community. To continue tree upkeep post planting, 53 individuals have been trained through 34 trainings on tree maintenance.

Purchased Renewable Energy-powered Buses

Early implementation milestones for TCC-funded projects include advancing the procurement of 14 fully electric buses. Unfortunately, due to the pandemic, manufacturing has been delayed. Renewable natural gas is sourced from waste management facilities such as landfills, wastewater treatment plants, and food digesters. When bus manufacturing completes, the 14 buses will be to put into service along existing and expanded transit routes that service the TCC project area, thereby reducing GHG emissions from local transit operations.

Brought Solar to Low-Income Households

Through the end of FY 2021-2022, project partners installed seven solar photovoltaic systems across the project area, totaling 24 kilowatts of DC-rated power. The installed systems benefited low-income homeowners, thereby providing financial relief in the face of rising energy costs. For a case study on two families that have experienced such relief, see **page 30**.

Expanded Community Engagement Efforts

Green Together's Community Engagement Plan is well underway and strategically leverages much of the existing programming offered through Pacoima Beautiful.

This approach has also empowered resident leaders to take on greater roles of public influence by strengthening their communication skills, climate literacy, and relationships with projects partners. See **page 36** for case studies on resident leaders who are at the forefront of engagement efforts.

Additional implementation efforts will include culturally and linguistically appropriate outreach activities, such as learning activities, focus groups, surveys, door-to-door canvassing, and home "charlas" (talks). Each program and infrastructure plan has a community engagement component. This allows residents to provide their opinions and thoughts about how to implement the project.

Key Accomplishments Through June 2022

Partnership Formation

- » Developed an evaluation plan, in collaboration with LCI, for tracking the outputs and outcomes from each project and plan
- » Established the Green Together Steering Committee with at least one representative from each funded and leveraged project
- » Established a publicly elected Leadership Council to provide feedback on key decisions to the Steering Committee. It comprises two residents, two business leaders, two local nonprofits, two anchor institutions, two community leaders, and one local elected official

Climate Action

- » **708** trees planted and maintained along streets in the project area
- » **106** fruit trees were dispersed to residents within the project area
- » **14** electric buses are currently being manufactured for eventual use along Osborne and Paxton streets within the project area
- » **7** solar photovoltaic systems installed on residential properties occupied by low-income households, providing 23.8 kW kilowatts of DC-rated solar power

Community Engagement

- » **4,412** stakeholders engaged through social media platforms
- » **288** individuals engaged through door-to-door outreach
- » **28** Clean Air Ambassadors recruited to support air quality data collection
- » **27** meetings of the Green Together Steering Committee held
- » **13** meetings of the Green Together Leadership Council held
- » **7** individuals who provided commentary on Green Together implementation
- » **6** community events hosted in the project area to disperse information about Green Together initiatives

Connected Residents With Training and Employment

The Green Together Workforce Development Plan is also well underway in connecting residents with training and employment opportunities. Project partners have used TCC dollars to fund the position of a workforce specialist who provides one-on-one career counseling at the Green Together Resource Center. In addition to career counseling services, project partners have also used TCC dollars to create new training and employment opportunities on TCC-funded projects. The box on the right provides detailed numbers. See **page 32** for a case study on two individuals who made major career shifts through their work with the Los Angeles Conservation Corps.

Coordinated Efforts to Mitigate Displacement

While the Green Together's Displacement Avoidance Plan is funded entirely by leveraged sources, it has formalized coordination among project partners to address the indirect effects of TCC investments on displacement. Over the course of two quarters from January to June of 2021, Pacoima Beautiful worked closely with UCLA, including 15 graduate students, Professor Vinit Mukhija and support staff Silvia R. González of the Masters of Urban and Regional Planning Program to develop research projects that directly support the efforts of the Displacement Avoidance Plan. To mitigate commercial displacement, project partners conducted site visits and surveys to assess the health and needs of small businesses and then linked engaged stakeholders with services and resources offered through the local community development corporation.

Key Accomplishments Through June 2022

Workforce Development

- » Established the Green Together Resource Center, a hub for job training and placement opportunities
- » **25** individuals engaged at the Green Together Resource Center
- » **22** participants completed job training
- » **8** events to learn job training programs hosted

Displacement Avoidance

- » **225** individuals participated in the Getty Center's 25-year anniversary event where local artists displayed their work and skills and received merchandise and educational workshops
- » **110** surveys distributed to assess business needs and displacement concerns
- » **14** white papers published on displacement avoidance planning topics
- » **10** workshops held to address the business needs of artists
- » **7** local small businesses visited to assess their health and needs
- » **3** businesses near the Bradley Alley Plaza engaged on building and growing their business with support from the local community development corporation

Responded to the COVID-19 Pandemic

Despite the many challenges presented by the pandemic, most Green Together projects and plans were able to continue. The ways in which project partners pivoted in response to the pandemic are highlighted throughout this report, including changing community engagement plans quickly and effectively. Through social distancing measures to online video meetings, community engagement events were able to be held in safe manner. The only project completely delayed due to unforeseen pandemic disruptions is the transit operations project, which delayed bus manufacturing timelines.

As the Safer At-Home order lifted, Green Together projects continued to move forward. For FY 2021-2022, the first in-person community engagement meetings were conducted with social distancing, face mask requirements, and outdoor events. More notable implementation pivots are provided on the right. For more detail how Green Together responded to COVID-19, see individual project and plan profiles in the following chapters, as well as stories from community members on [page 27](#).

Key Accomplishments Through June 2022

Pandemic Responses

- » Community engagement efforts switched to virtual platforms for meetings, workshops, events
- » Mailings and posting flyers were incorporated for each community engagement activity, in addition to cold-calling project area residents
- » Solar and tree planting partners held in-person events outdoors with face mask requirements
- » A website was created to disperse information about Green Together initiatives alongside social media platforms

Governor Jerry Brown in Fresno signs a package of climate change bills in September of 2016, including Assembly Bill 2722, which was authored by Assemblymember Autumn R. Burke (at right) and established the Transformative Climate Communities (TCC) Program. Photo credit: The Fresno Bee

The Vision Behind TCC

THE TRANSFORMATIVE CLIMATE COMMUNITIES PROGRAM (TCC) was authorized in 2016 by Assembly Bill 2722 (authored by Assembly member Autumn Burke). The bill's intent is to fund the development and implementation of neighborhood-level transformative climate community plans that include multiple coordinated greenhouse gas (GHG) emissions-reduction projects that provide local economic, environmental, and health benefits to disadvantaged communities.³ The program is part of California's broader suite of programs, referred to as California Climate Investments, that use revenues from the state's Cap-and-Trade Program to fund projects that reduce GHG emissions. TCC is novel because of three signature elements: 1) its place-based and community-driven approach toward transformation; 2) robust, holistic programming via the integration of diverse strategies; and 3) cross-sector partnerships. The authors of this report are not aware of such a comprehensive, community-driven, and place-based climate action program anywhere else in the world.

³ AB 2722, Transformative Climate Communities. 2016. Web. February 2017. Retrieved from: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160AB2722

As a place-based program, TCC requires that all grant applicants identify a project area that will be the focus of their TCC proposal. Proposals must be borne out of a robust community engagement process that brings together residents and stakeholders toward the development of a shared vision of how to invest TCC funds. The program's emphasis on comprehensive community engagement helps ensure that proposals are based on a deep understanding of a community's needs and assets, thereby maximizing the benefits that TCC dollars bring to existing residents in a selected site.

As a holistic program, TCC integrates a wide variety of GHG-reduction strategies, such as sustainable land use, low-carbon transportation, renewable energy generation, urban greening, and waste diversion. With these strategies in mind, TCC grantees develop site-specific projects, such as transit-oriented affordable housing, expanded bus service, rooftop solar installations, tree planting, and food waste recovery. These GHG-reduction projects are modeled after existing California Climate Investment (CCI) project types, but TCC is novel in that it unifies them into a single, place-based initiative. In addition to integrating various CCI project types, TCC also requires TCC sites to incorporate crosscutting transformative plans, ensuring that TCC investment is underpinned by meaningful community engagement, provides direct economic benefits to existing residents and businesses, and enables these stakeholders to remain in their neighborhood. Moreover, grant recipients are expected to use TCC dollars in concert with other sources of funding that could complement the TCC investment to implement the community vision.

Last, the program emphasizes cross-sector partnerships by requiring applicants to form a coalition of organizations that would carry out the implementation of the community vision. To assure that the implementation will deliver the community vision, all applicants are required to have an oversight committee that consists of project partners, community members, and local community-based organizations. The diverse partnerships, robust governance, and aforementioned transformative plans help ensure transparency and accountability for the investments, all while building the capacity of communities historically underinvested in, thereby helping to reverse that trend.

Program Administration

SGC awards TCC grants and administers the program in partnership with the Department of Conservation (DOC), with collaboration by other state agencies. SGC staff coordinates efforts with partnering state agencies and works with the California Air Resources Board (CARB) and DOC on program guidelines, evaluating applications, preparing agreements, monitoring agreement implementation, and program reporting.

There are two types of grants administered through TCC: implementation grants and planning grants. SGC awards implementation grants to sites that have demonstrated a clear, community-led vision for how they can use TCC dollars to achieve program objectives in their communities. SGC also awards planning grants to fund planning activities in disadvantaged communities that may be eligible for future TCC implementation grants and other California Climate Investment programs. The implementation grants are funded through California's Cap-and-Trade auction proceeds, while the planning grants are funded through a mix of Proposition 84 funds and Cap-and-Trade auction proceeds.

Program Awards

Since the launch of the program in 2016, there have been four rounds of awards. During Round 1, which was tied to fiscal year (FY) 2016-2017 funding, a total of \$133 million was allocated to implementation grants and \$1.6 million was allocated to planning grants. For Round 2, which was tied to FY 2018-2019 funding, a total of \$46 million was allocated to implementation grants, and a total of \$800,000 was allocated to planning grants. For Round 3, which was tied to FY 2019-2020 funding, a total of \$48 million was allocated to implementation grants and a total of \$600,000 was allocated to planning grants. Last, for Round 4, which was tied to FY 2021-2022 funding, a total of \$94 million was allocated to implementation grants and a total of \$2 million was allocated to planning grants. Table 1 provides an overview of the implementation and planning grants that have been distributed through FY 2021-2022.

Table 1: Overview of TCC Implementation and Planning Grants Through FY 2021-2022

Site Location	Round (Fiscal Year)	Grant Type	Funding Amount
Fresno	Round 1 (FY 2016-2017)	Implementation	\$66.5 million
Ontario	Round 1 (FY 2016-2017)	Implementation	\$33.25 million
Los Angeles - Watts	Round 1 (FY 2016-2017)	Implementation	\$33.25 million
Coachella Valley	Round 1 (FY 2016-2017)	Planning	\$170k
East Los Angeles	Round 1 (FY 2016-2017)	Planning	\$170k
East Oakland	Round 1 (FY 2016-2017)	Planning	\$170k
Gateway Cities	Round 1 (FY 2016-2017)	Planning	\$170k
Moreno Valley	Round 1 (FY 2016-2017)	Planning	\$94k
Richmond	Round 1 (FY 2016-2017)	Planning	\$170k
Riverside	Round 1 (FY 2016-2017)	Planning	\$170k
Sacramento - Franklin	Round 1 (FY 2016-2017)	Planning	\$170k
Stockton	Round 1 (FY 2016-2017)	Planning	\$170k
West Oakland	Round 1 (FY 2016-2017)	Planning	\$170k
Northeast Los Angeles – Pacoima/Sun Valley	Round 2 (FY 2018-2019)	Implementation	\$23 million
Sacramento - River District	Round 2 (FY 2018-2019)	Implementation	\$23 million
Bakersfield	Round 2 (FY 2018-2019)	Planning	\$200k
Indio	Round 2 (FY 2018-2019)	Planning	\$200k
McFarland	Round 2 (FY 2018-2019)	Planning	\$200k
South Los Angeles	Round 2 (FY 2018-2019)	Planning	\$200k
Tulare County	Round 2 (FY 2018-2019)	Planning	\$200k
East Oakland	Round 3 (FY 2019-2020)	Implementation	\$28.2 million
Riverside – Eastside	Round 3 (FY 2019-2020)	Implementation	\$9.1 million
South Stockton	Round 3 (FY 2019-2020)	Implementation	\$10.8 million
Pomona	Round 3 (FY 2019-2020)	Planning	\$200k
Porterville	Round 3 (FY 2019-2020)	Planning	\$200k
San Diego - Barrio Logan/Logan Heights	Round 3 (FY 2019-2020)	Planning	\$200k
Richmond	Round 4 (FY 2021-2022)	Implementation	\$35 million
South Los Angeles	Round 4 (FY 2021-2022)	Implementation	\$35 million
South Stockton	Round 4 (FY 2021-2022)	Implementation	\$24.2 million
San Diego - Spring Valley	Round 4 (FY 2021-2022)	Planning	\$300k

Evaluating the Impacts of TCC

In 2017, SGC contracted with the University of California, Los Angeles and the University of California, Berkeley (UCLA-UCB evaluation team) to draft an evaluation plan for assessing the progress and outcomes of Round 1 TCC implementation grants at the neighborhood level. In November 2018, the UCLA-UCB evaluation team published an evaluation plan to serve as a guide for evaluating the three TCC Round 1 sites.⁴

After the publication of the Round 1 evaluation plan, the UCLA-UCB evaluation team entered a second contract with SGC to serve as the third-party evaluator in all three Round 1 sites. The UCLA Luskin Center for Innovation (LCI) is now the sole contractor in that role and will continue as such for the first five years of TCC Round 1 grant implementation (2019 through 2024).

For Rounds 2 and 3 of the program, each TCC site selected a third-party evaluator from a list of qualified evaluation technical assistance providers that were preapproved by SGC through an open application process. LCI was selected to serve as the evaluator for the Round 2 grant in Northeast Los Angeles (Pacoima) and the Round 3 grant in Stockton.

LCI's evaluation plans for Rounds 2 and 3 closely follow the evaluation plan from Round 1, with some site-specific

modifications to reflect each site's unique projects, goals, and priorities for data tracking. These modifications were made in close consultation with the project partners in each TCC site.

Conceptual Framework for Evaluating TCC

Logic models greatly informed all of the evaluations plans that LCI produced. Logic models illustrate the interim steps that must occur for a project or plan to realize its intended goals. Within the context of TCC, these steps are defined as follows

- » **Inputs:** The investment dollars and leveraged funds that support TCC
- » **Activities:** The work of TCC grantees and co-applicants
- » **Outputs:** The products and services that TCC projects produce and deliver
- » **Short-term Outcomes:** Changes in stakeholders' knowledge, attitude, and skills
- » **Intermediate Outcomes:** Changes in stakeholders' behaviors, practices, or decisions
- » **Impacts:** Changes in environmental or human conditions that align with the objectives of TCC (i.e., GHG-reductions; public health and environmental benefits; and economic opportunities and shared prosperity).

⁴The UCLA Luskin Center for Innovation and UC Berkeley Center for Resource Efficient Communities. 2018. *Transformative Climate Communities Evaluation Plan: A Road Map for Assessing Progress and Results of the Round 1 Place-based Initiatives*. Retrieved from: http://sgc.ca.gov/programs/tcc/docs/20190213-TCC_Evaluation_Plan_November_2018.pdf

The LCI evaluation team translated the latter four steps in the logic model framework into indicators that could be quantified and tracked for the purposes of program evaluation. The Green Together evaluation plan summarizes the final list of indicators that will be tracked over the initiative's five-year completion period (2020 through 2025), as well as the methods for tracking them.⁵ Indicator tracking responsibilities will be partially split among the LCI evaluation team and the TCC project partners. In general, all output-related indicators will be tracked by the project partners, while most outcome and impact related indicators will be tracked by the LCI evaluation team.

Quantitative Methods for Evaluating TCC

To quantitatively assess the effects of TCC, the LCI evaluation team will conduct two different forms of comparison: (1) before-and-after TCC investment; and (2) a with-and-without TCC investment. Together, these two modes of comparison will provide the most reliable assessment of what changes can be attributed to TCC investment.

For the before-and-after comparison, the LCI evaluation team will measure changes in indicators before and after TCC kickoff, which occurred in 2020 for the Green Together TCC grant. When possible, the LCI evaluation team will construct a five-year pre-kickoff trend line (2015-2019) and a five-year post-kickoff trend line (2020-2024).

For the with-and-without comparison, the LCI evaluation team will compare trends in TCC sites to trends in a set of control sites that did not receive TCC investment. This will help isolate the effect of TCC from larger social, economic, and environmental forces that may also be acting on indicators. To support this effort, the LCI evaluation team has identified control sites that are similar to TCC sites along a number of dimensions, including socioeconomic demographics, climate, and pollution burden (as demonstrated by CalEnviroScreen scores).⁶

In addition to measuring changes within TCC sites and control sites, the LCI evaluation team is also measuring changes at the county and state level for indicators that speak to social equity (e.g., income, employment, housing costs, etc.). This will allow the LCI evaluation team to assess whether TCC is reducing socioeconomic disparities between TCC sites and the broader regions where they are located. If, for example, employment slightly increases within TCC sites, but a much greater increase is observed regionally, then the economic gap between TCC sites and nearby communities has not been sufficiently addressed.

In summary, the LCI evaluation team will analyze quantitative data at four geographic scales (where possible):

- » **TCC project area:** The neighborhood boundary identified by the TCC grantees in which all TCC investments will be located. In some cases, a cluster of census tracts that have more than 10% area overlap with the TCC project boundary area will be used for indicator tracking purposes instead of the actual project boundary. This is the case for all indicators that rely on American Community Survey (ACS) data, which cannot reliably be apportioned to fit the actual TCC project boundary area. See **Appendix 4 (page 76)** for a list of census tracts that will be used as a proxy for Green Together's project boundary area.
- » **TCC control sites:** A cluster of census tracts that match TCC census tracts along a number of dimensions (e.g., demographics, climate, pollution burden, etc.) but that did not receive TCC investment. Collecting before-and-after data for the control sites will help control for external forces that may also be acting on indicators of interest within TCC sites. See **Appendix 5 (page 77)** for a list of census tracts serving as control sites for evaluating the impacts of TCC investment in the NE San Fernando Valley.
- » **County:** The county in which TCC sites are situated (Los Angeles County in this report). County-scale measurements are helpful for understanding the degree to which TCC investments are addressing social equity concerns at a regional scale.
- » **State:** The state in which TCC sites are located (California). Like county-scale measurements, statewide measurements are helpful for understanding the degree to which TCC investments are addressing social equity concerns, but at a broader scale.

It's important to underscore that not all indicators easily lend themselves to analysis at the latter three scales. Many TCC indicators rely on the collection of primary data, and it may be cost prohibitive or technically infeasible to collect that data for control sites, the county, or the state. This is true for indicators such as trees planted and compost produced, which are reported to the LCI evaluation team directly by project partners. Even when secondary data are readily available at all four scales, it may not be prudent to use limited evaluation resources to analyze the data at all of those scales. This is true for bicyclist and pedestrian collision data, which must be cleaned and geocoded before being analyzed. Furthermore, some indicators must be estimated because they cannot be measured directly (e.g.,

⁵A digital copy of the Green Together evaluation plan is available upon request (send request to luskincenter@gmail.com).

⁶See the TCC Round 1 Evaluation Plan (Appendix 3.2) of the TCC Round 1 Evaluation Plan for a summary of the methods used to identify control sites, which remain the same for Round 2: http://sgc.ca.gov/programs/tcc/docs/20190213-TCC_Evaluation_Plan_November_2018.pdf

GHG-reductions, indirect jobs, etc.). In cases these cases, the LCI evaluation team is providing estimates for TCC sites only. Developing estimates for other geographic scales requires making a number of site-specific assumptions that are outside the LCI evaluation team's scope of work.

It is also important to note that it could take a generation for the transformative impacts of TCC investment to be quantitatively measured. Urban tree canopy, for example, can take 40 years to grow to maturity. Similarly, a career transition can require close to a decade (or more) of education and skill building. Thus, at the end of the relatively short five-year evaluation period, changes in impact indicators may be too small to draw any statistically valid conclusions. Nonetheless, the LCI evaluation team will update impact indicators annually for the sake of maintaining a complete time series. See **Appendix 6 (page 78)** for the latest indicator data the LCI has collected.

Qualitative Methods for Evaluating TCC

Many of the potential benefits of TCC will likely be missed by the quantitative methods previously described. For example, improvements in well-being, community capacity to tackle new challenges, and communication across diverse stakeholder groups are difficult to describe in numerical terms. Thus, to capture some of the nuanced effects that TCC may have at the individual and community level, the LCI evaluation team will analyze qualitative data collected from surveys, interviews, and focus groups.⁷

The LCI evaluation team will prioritize the use of qualitative data collection instruments for examining the aspects of TCC that are particularly novel relative to other grant programs. Specifically, the LCI evaluation team will collect qualitative data about the rollout of the transformative plans and the collaborative stakeholder structure (see **Appendix 3, page 75**, for a full list of members).

Communicating the Effects of TCC

The LCI evaluation team will release five annual progress reports that document the early effects of TCC investment in the Northeast San Fernando Valley project area. These five progress reports will primarily highlight findings from the LCI evaluation team's quantitative data collection. High-level findings from qualitative research activities will be summarized in a final closeout report by the end of the evaluation (July 15, 2026), once all qualitative data collection efforts have been completed.

To complement LCI's observations about the effects of

TCC, each annual progress report also spotlights the perspectives of TCC project partners and beneficiaries. These perspectives are highlighted in the following chapter, titled "Stories from the Community." The individuals profiled in this chapter are recruited directly by TCC project partners and are interviewed by the LCI evaluation team. From these interviews, the LCI evaluation team develops two case studies per year about how the effects of TCC are being felt on the ground.

Evaluation Activities Through June 2022

In the months after grant execution, the LCI evaluation team worked with Green Together project partners to operationalize indicator tracking protocols. Specifically, the LCI evaluation team developed reporting forms to streamline tracking activities and trained project partners on how to use those forms. On an annual basis, project partners will complete and submit indicator reporting forms to the LCI evaluation team. Each submission reflects the project partner's activities during the previous fiscal year. Many of the key accomplishments described in this document are pulled directly from the reporting forms submitted by Green Together project partners.

By the end of 2019, the LCI evaluation team completed baseline data collection for quantitative indicators. Findings from the baseline data collection process are narratively described in the final chapter of Green Together's first annual report, titled *Green Together: A Baseline and Progress Report on Implementation of the TCC Grant*. The underlying data for analyzing baseline trends are also included in **Appendix 6 (page 78)** of this report, along with additional data that has been collected and processed within the past year. This Appendix will be updated annually through the release of the 2025 progress report.

With respect to qualitative data collection, the LCI evaluation team has disseminated two surveys in the North-east San Fernando Valley project area: (a) one focused on outcomes from community engagement activities and (b) one focused on outcomes from workforce development activities. The LCI evaluation team substantially revised the survey instruments from the versions posted in the 2018 evaluation plan, improving their legibility, and reducing their completion time. The surveys have been made available in both English and Spanish, and in print and online formats.

The community engagement survey was distributed at informational workshops about TCC projects (e.g., the

⁷See Section 3.3 of the TCC Round 1 Evaluation Plan for a summary of the timing, intent, and target population associated with each of these data collection instruments, which remain the same for Round 2: http://sgc.ca.gov/programs/tcc/docs/20190213-TCC_Evaluation_Plan_November_2018.pdf (since the publication of the Round 1 evaluation plan, the LCI evaluation team has also committed to interviewing members of each TCC site's collaborative stakeholder structure on annual basis about implementation successes, challenges, and opportunities to improve the rollout of TCC in real world contexts)

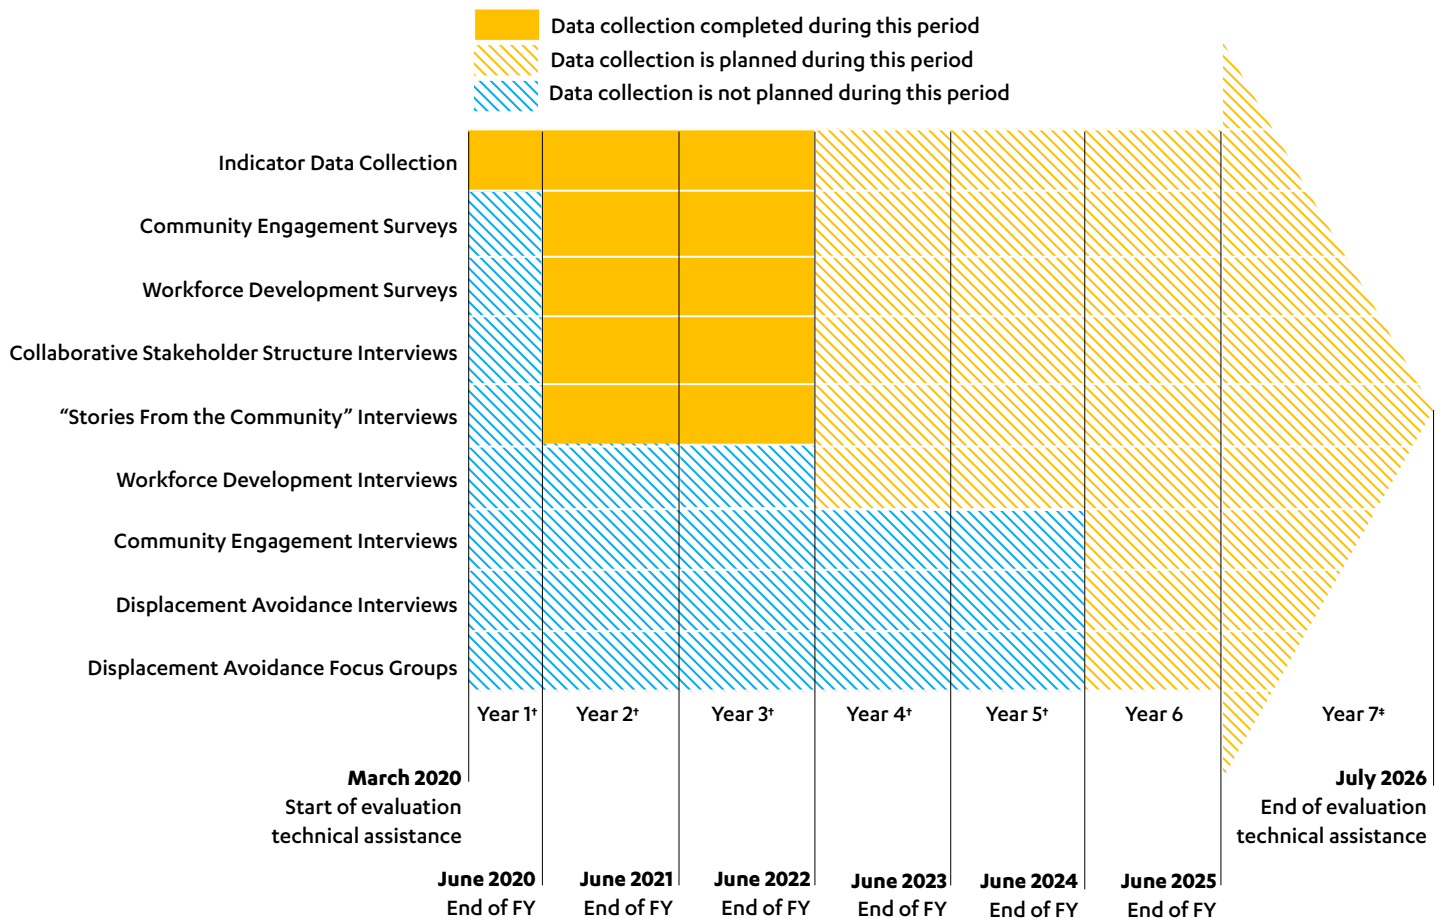

Green Together launch event on May 22, 2021). The workforce development survey was disseminated at the beginning and end of GRID Alternatives’ and the Los Angeles Conservation Corps’ training programs (see **page 43** for an overview of these programs).

In addition to surveys, the LCI evaluation team has conducted interviews annually with members of the collaborative stakeholder structure to learn more about the process of TCC implementation, including strengths, challenges,

and opportunities for improvement. The LCI evaluation team has also conducted interviews on annual basis to inform the case studies in the following chapter, collectively referred to as “Stories from the Community.”

Figure 2 provides a summary timeline of data collection activities that the LCI evaluation team is coordinating in the Northeast San Fernando Valley project area. The timing of pending activities is subject to change.

Figure 2. Timeline of Data Collection Activities for TCC Round 2 Implementation Grants*

A Brief History of Northeast San Fernando Valley: The Legacy of Environmental Injustice

Located in the Northeast San Fernando Valley (NE Valley) in the City of Los Angeles, the Green Together project area includes part of the Pacoima and Sun Valley neighborhoods. The area is a vibrant, predominantly Latino immigrant community situated under the flight path of Whiteman Airport, at the intersection of multiple freeways, landfills, and industrial facilities that are a significant source of noise, greenhouse gas emissions, and air pollution.

Pacoima is one of the most historic areas in the San Fernando Valley, with origins dating back centuries before Spanish colonization in the late 18th century. First inhabited by the Fernandeano-Tongva and Tataviam people, Pacoima was originally called Pakoinga, meaning “the entrance.”⁸ The entrance is presumably to the Tujunga Watershed, which

provided the Tataviam not only with water but also plants to build shelter. In 1769, the Spaniards occupied the San Fernando Valley, building missions to advance Christianity and forcing Native Americans to work for them to sustain their colonies.⁹ Eventually, the property controlled by the missions made them a target of Mexican republicans who demanded secularization. In 1834, half of all mission lands were transferred to local tribes, but distribution was uncoordinated.¹⁰ Many Native Americans were cheated of the land and left the area.

In 1887, Jouett Allen, a Southerner and lawyer, bought 1,000 acres of land between the Pacoima Wash and Tujunga Wash, creating the town of Pacoima.¹¹ The land was developed as an exclusive community to attract wealthy settlers and correspond with the new Southern Pacific Railroad station. However, after a massive flood in 1891, Pacoima evolved into an agricultural community. In the early 1900s, political conflict in Mexico led many Mexicans to migrate to California, with some settling in Pacoima, one

of the few areas people of color could purchase land due to racially restrictive covenants.¹²

Many Japanese, attracted to agricultural opportunities, also migrated to the northeastern San Fernando Valley. They “were a major part of the California agricultural economy, growing various fruits, vegetables, as well as flowers.”¹³ After the bombing of Pearl Harbor, Japanese residents were forced into internment camps and experienced extreme loss, including the lands they had cultivated. After World War II, many African Americans also moved to Pacoima as a result of being excluded from other neighborhoods. In the 1960s, almost all of the Valley’s Black population lived in Pacoima because they were prohibited from buying or renting anywhere else.¹⁴

In the late 1960s, immigrants from Mexico and Central America began to migrate to Pacoima due to inexpensive housing and nearby aerospace and automotive manufacturing jobs.¹⁵ Subsequently, there was a shift in the racial makeup of Pacoima as African Americans, who once represented the majority of the population, began to relocate. In the 1990s, Pacoima experienced deindustrialization, or the decline in industrial activity. As major manufacturing companies, such as Lockheed-Martin and General Motors, began to move out of the San Fernando Valley, so did the middle-class jobs and the families that they supported. As a result, unemployment escalated, along with the presence

of gangs, leading to poverty, crime, and violence.

Today, approximately 100,000 people live in Pacoima, and over 80% of them identify as Latino. The neighborhood is composed of single-family homes, apartment complexes, and commercial and industrial use buildings. Instead of being contained, industrial uses are dispersed among residential areas. Many residents have formally or informally converted their single-family homes into multi-family units, contributing to an unseen density.

One of the main environmental concerns facing Pacoima is poor air quality. Because land use policy has been historically dominated by industrial uses, Pacoima and Sun Valley have some of the worst air quality and highest concentrations of polluting sources in California. The geography of the area, a valley, causes hazardous air pollutants, like ozone, to settle near ground level. Surrounded by the I-5, CA-118 and I-210 freeways, Pacoima also has a train track cutting through it, an airport that houses diesel-burning planes and helicopters, several active landfills, and multiple facilities that handle toxic chemicals. In addition to poor air quality, the neighborhood lacks green spaces and dedicated infrastructure for pedestrians and bicyclists.

Despite these challenges, Pacoima has many community members dedicated to making the place a healthier and safer place to live. In 1996, a group of mothers created

Pacoima Beautiful, a grassroots environmental justice organization, because they wanted to protect their children from pollution.¹⁶ In its early years, Pacoima Beautiful organized simple community cleanups and tree plantings, but in the last two decades, it has expanded its scope to include policy advocacy, educational programs, youth engagement, and a community garden.

Some of Pacoima Beautiful’s initiatives include: Clean Up Green Up (CUGU), Complete Streets, and the Pacoima Wash Vision Plan.¹⁷ CUGU works to establish “green zones,” where land use policies that protect health would apply to any new businesses, and where existing businesses would receive assistance and incentives to adopt new technologies that reduce environmental harms. The goal of Complete Streets is to create streets that are safe for everyone and advocate for improvements to the neighborhood’s street infrastructure. More green space is built through the Pacoima Wash Vision Plan, including multiuse paths for pedestrians, cyclists, and equestrians.

Despite decades of local grassroots activism to address community needs, residents continue to face many economic and health challenges, including high pollution burden, high rates of poverty and obesity, and early stages of residential and commercial gentrification. Climate change will likely exacerbate these challenges as Los Angeles becomes a hotter and costlier place to live.

Green Together: Looking Back and Forward

The NE San Fernando Valley TCC Implementation Grant is the result of years community engagement, strategic planning, and capacity building. This section provides a brief history of that work.¹⁸

Early Place-Based Planning Efforts

The NE Valley has been the focus of intense planning, pilot projects, and grassroots community organizing since the mid-1990s, particularly in the Pacoima neighborhood. The area experienced gang conflict that surged in the 1980s. Unparalleled levels of community activism, led by education, faith, and community leaders, arose to counter the longtime war on the streets. From these efforts, five mothers who wanted to improve the community through beautification projects formed Pacoima Beautiful in 1996. Pacoima Beautiful is now a trusted partner in the community, with over 10,000 members, and continues to be the only environmental justice organization in the NE Valley. Pacoima Beautiful is the lead organization behind Green Together Network. In the past decade, Pacoima Beautiful has partnered with residents, public agencies, and other partners in the Green Together Network to successfully plan and implement several major place-based initiatives to beautify NE Valley.

¹⁸ For additional background, refer to the Greenlining Institute’s case study on the Northeast San Fernando Valley, titled *Community-Controlled Solutions Built On Decades of Organizing*, available at: <https://greenlining.org/publications/community-controlled-solution-tcc-case-study/>

The work specific to Green Together began in 2007 when Pacoima Beautiful led a coalition of community residents, public agencies, and environmentalists to reimagine the Pacoima Wash as a vital community asset. The reinvisioned tributary included improved wildlife habitats and providing access to new recreational amenities to create a healthier, more sustainable community. These efforts led to the development of the 2011 Pacoima Wash Vision Plan funded through the Los Angeles County Department of Public Health by a competitive grant in 2008. The development of the plan included a multifaceted outreach effort that included multiple focus groups, door-to-door knocking, and a mobile charette that gave participants the opportunity to walk alongside the Pacoima Wash, which is normally restricted to the public. Further visioning of the wash began in 2015 through the Pacoima Urban Greening Vision Plan with grants from the state's Strategic Growth Council (SGC) and the Santa Monica Mountains Conservancy in partnership with Kounkuey Design Initiative (KDI).

Green Together Begins

The result of all of these engagement efforts led to a suite of projects and plans developed for the TCC project based on community priorities identified through Pacoima Beautiful's decades of organizing. The projects and plans are aimed at reducing GHG emissions while also providing local environmental, health and economic co-benefits for residents of the NE Valley. Per the TCC guidelines for applicants, the Green Together proposal included the following elements: (1) TCC-funded projects that have a direct impact on GHG-reductions; (2) leveraged projects that further the broad goals of TCC and only use matching funds; and (3) transformative plans to ensure that the suite of projects are bolstered by meaningful community engagement, workforce development, and displacement avoidance activities. As a place-based initiative, Green Together

proposed concentrating TCC dollars in a 4.9-square-mile area of the NE Valley that includes central Pacoima and northern Sun Valley.

In December 2018, Green Together was selected through a competitive grant process by SGC for a grant of \$23 million to bring its vision to fruition. Green Together will also leverage at least \$38.7 million in outside funds toward this vision. The TCC award not only brings a significant influx of financial resources to the community but also reinforces the cross-sector partnerships that were built before and during the TCC application process. **Table 3, next page,** provides a summary of the Green Together projects, plans, and partners involved with implementation. **Appendix 1, page 71,** provides a detailed map of where the TCC and leveraged projects are located within the TCC boundary area. In April 2023, the Green Together Collaborative announced a project boundary area expansion from a 4.4-square-mile area to a 4.9-square-mile area in order to target additional beneficiaries, but these changes are not reflected in this annual report as they require additional data analysis beyond the evaluator's current scope of work. The new project boundary maintains compliance with the TCC application requirements, such as a contiguous boundary area and that is within the 75% top disadvantaged communities census tracts per CalEnviroScreen 3.0.

The next three sections of this report provide summary profiles on the various transformative plans, TCC-funded projects, and leveraged projects that make up Green Together. Each profile includes an overview of the project or plan's goals, the roles of various partners involved with implementation, and key accomplishments that have occurred after the announcement of Green Together's award through the end of FY 2021-2022. This period overlaps roughly with about one year and a half of post-award consultation and two years of program implementation.

Table 3: Summary of Green Together Projects and Plans

Project/Plan Type	Project/Plan Name	Partners	TCC Funding	Leveraged Funding
Community Engagement Plan	N/A	Pacoima Beautiful*	\$1,930,002	\$0
	Multi-family Feed-in Tariff Program	Los Angeles Business Council	\$429,000	\$0
Displacement Avoidance Plan	N/A	Pacoima Beautiful*	\$0	\$305,706
Workforce Development Plan	N/A	GRID Alternatives* Los Angeles Conservation Corps	\$686,820	\$0
Active Transportation	Pedestrian Mobility Improvements	The Trust for Public Land*	\$3,822,067	\$0
Transit Operations	Pacoima DASH E-Bus	Los Angeles Department of Transportation*	\$2,513,000	\$9,912,000
Low Carbon Transportation	Electric Vehicle Charging Stations	The Trust for Public Land*	\$459,174	\$0
Rooftop Solar	Single-family Solar Photovoltaic Installations	GRID Alternatives*	\$4,702,495	\$111,350
Urban Greening	David M. Gonzales Park Renovation	The Trust for Public Land*	\$2,267,665	\$0
Urban and Community Forestry	Street Tree Planting	Los Angeles Conservation Corps*	\$2,897,586	\$175,000

	Green Streets	Los Angeles Bureau of Sanitation*	\$0	\$3,665,000
Total**			\$22,525,000	\$38,689,137

* Project lead

** TCC funding total does not include additional grant money provided for grant administration and other related activities to Community Partners (\$2,532,190.95), and required budget for indicator tracking and technical assistance (\$475,000 for a seven-year period) between the Grantee and UCLA Luskin Center for Innovation).

GREEN TOGETHER: STORIES FROM THE COMMUNITY

Youth painting at the Prende el Sol Community Event hosted by Green Together Collaborative in October 2022. Photo credit: Green Together Collaborative

AS A COMMUNITY-LED INITIATIVE, Green Together engages a wide variety of stakeholders. Residents, local business owners, workers, and others help implement projects to advance community-defined goals for climate action, economic development, and more. This chapter provides a series of case studies of how these stakeholders have contributed to the rollout of Green Together and/or benefited from the initiative’s suite of projects and plans. The case studies are presented in reverse chronological order in order to spotlight more recent additions to this annual report. It’s important to note that these stakeholders represent only a small sample of the many individuals who have shaped — or been shaped by — the implementation of Green Together. Thus, their purpose is to be illustrative, but not exhaustive, of the ways in which Green Together has touched the lives of community stakeholders.

Leadership council members connect existing community networks

BACKGROUND

This case study highlights how the Green Together Leadership Council brings together a diverse set of community leaders who play integral roles in the Northeast San Fernando Valley by integrating and bolstering their varied experiences to share information and gather feedback on TCC-funded projects. The Leadership Council is a central part of Green Together's collaborative stakeholder structure — see page 38 to learn more.

Interviews for this story were conducted in October 2022 and February 2023.

Michael Centeno speaks at Tía Chucha's Centro Cultural, where he serves as executive director. Photo courtesy of Michael Centeno.

MICHAEL CENTENO has lived his whole life in Sylmar, a neighborhood bordering the Green Together project area. For the better part of two decades, he has been working with Tía Chucha's Centro Cultural, a nonprofit cultural center that supports Northeast San Fernando Valley residents in developing literacy skills and engage with artistic and creative outlets. The organization offers classes for youth and adults, hosts open mic nights, prints locally written poetry, and runs a wide variety of other cultural programming. In 2018, Centeno became the first paid executive director of Tía Chucha's after spending years as a volunteer.

In 2021, Pacoima Beautiful invited Centeno to join the Green Together Leadership Council — a collaborative body created to provide input throughout the TCC grant implementation process, which is composed of residents, business leaders, representatives of local nonprofits and anchor institutions, community leaders, and a local elected official. It was the first Centeno had heard of Green Together. Centeno thought that joining the Leadership Council would be a good opportunity to bring his experience engaging the community to the table while also becoming more aware of efforts to make the neighborhood more climate resilient.

Centeno has found it to be a beneficial experience, helping him to better understand the challenges people face in his

“The Leadership Council is a great opportunity to learn what’s happening in the climate change realm. My organization doesn’t focus on that work, but we are still part of this community and can help share resources.”

MICHAEL CENTENO

own neighborhood and the Northeast San Fernando Valley more broadly. In particular, he has gotten a better understanding of the challenges Spanish-speaking community members deal with, such as accessing services advertised only in English.

Centeno has also learned about the resources available to residents who face such challenges. As a member of the Leadership Council, he has learned about Green Together's programs, and he shares these resources with community members — starting with visitors to the Tía Chucha's bookstore. “We always encourage Green Together members to leave information on events and other resources in our bookstore, and when we have major events here, we let them know so that they can drop off flyers.”

While Centeno noted that he appreciates seeing all the

different organizations working to serve his community, he said he thinks more can be done to expand partnerships and coordinate all of the different efforts. “This experience has made me more aware of the community members and partners that are out there. We’ve shared resources, and it has definitely helped. But we could do more to be intentional with other partners.”

Centeno’s Leadership Council involvement has helped him — and, by extension, Tía Chucha’s — to become more integrated into the network of organizations working to transform the

Northeast San Fernando Valley community. He foresees these connections being helpful for the organization’s planned expansion from a rented space into its own building.

“We’re on a trajectory of growth. And this strong network can help us achieve our goals. We can learn a lot from each other and share resources, knowledge, and experience.”

MICHAEL CENTENO

WENDY THUM moved to Sun Valley from West Hollywood 13 years ago to buy a home. Since then, she has taken it upon herself to become deeply involved in her community. When a next-door neighbor noticed Thum’s strong community organizing skills and passion for helping others, she recommended that Thum run for neighborhood council. Thum took the chance to continue expanding her role in the community, and with her neighbor’s help campaigning, she was soon elected to the council. Ever since, she has chaired the Beautification Committee and often hosts community cleanup events. “It is so family oriented here, and everybody really looks after each other. When I set up cleanup events, everybody comes — and they bring their families. Everybody’s there.”

The Green Together Leadership Council is designed to bring together local stakeholders with varied experiences, skills, and interests. In contrast to TCC collaborative stakeholder structures in other communities, it must include one local elected official from the community. Pacoima Beautiful invited Thum to bring her organizing skills and neighborhood council resources to this role, which she has been doing for about one year at the time of this interview.

“With TCC, I get to discuss environmental initiatives that are based in reality. Having a big grant behind these ideas is quite persuasive when I’m talking with stakeholders in my council district.”

WENDY THUM

The role expands Thum’s outlets for environmental work beyond the Beautification Committee.

Thum’s experiences with volunteer work, her ability to motivate people, and her role on the neighborhood council have provided her with helpful resources as she serves on the Leadership Council. For example, she helped the Leadership Council develop its bylaws, drawing on her knowledge and experience from the neighborhood council’s process to create its bylaws. And Thum has broadcast information about Green Together resources and events throughout the community through her neighborhood council network. In return, she has gained a deeper understanding of other community members’ concerns and priorities — insight that can help her address issues in ways that fit the community’s needs and desires.

“Hearing people’s concerns, sometimes I realize that a problem is different from what I expected, and I need to learn new strategies for dealing with it to be successful.”

WENDY THUM

Thum’s roles on both the Leadership Council and the neighborhood council put her in a position to gather feedback from her neighbors and take action on their concerns. “I have learned a great deal,” she said. “Even after 13 years, I can always learn more about the culture of this area, and how to address problems that I might not have known about before.”

Free solar power fosters community trust — and saves wallets

BACKGROUND

This case study explores how project partners from the Green Together Collaborative helped build community trust in a TCC-funded solar installation program. Stories from two lower-income homeowners, Gloria Zuniga and Phillip Martinez, illustrate the power of partnering with trusted, local organizations who understand their communities. For more on Green Together’s solar projects, see [page 52](#).

Interviews for this case study were conducted in August 2022.

A GRID Alternatives team installs solar panels on a rooftop in Pacoima. Photo courtesy of GRID Alternatives

GLORIA ZUNIGA is a longtime Pacoima resident — she moved from East Los Angeles with her husband in 1981, and they raised their children there. Now, one of her favorite parts of living in Pacoima is the community. “The community members come from similar backgrounds as mine — we all share the same foods and speak the same language.”

Zuniga has been familiar with Pacoima Beautiful (the community-based organization that leads the Green Together Collaborative) for years, attending its events and workshops to build relationships and skills, as well as to get help filling out paperwork. She trusts the organization completely, particularly because of a yearslong relationship with one of the staff members.

When Zuniga learned from Pacoima Beautiful about Green Together’s free solar installation opportunity, run by GRID Alternatives, she was initially apprehensive. But her concerns were soon assuaged by the connection between the

program and Pacoima Beautiful. “I believe the program will benefit the community greatly, bringing people together and building closer ties.”

It wasn’t the first time Zuniga had heard about solar. Motivated to reduce her soaring electricity bills, she had already started to explore the option of rooftop panels on her home — in fact, she was already partway into a contract with another solar company, preparing to pay \$40,000 for the panels. So, she called Pacoima Beautiful. “The staff immediately told me about the free GRID Alternatives solar installation program and helped me cancel my previous contract.”

Gloria Zuniga at her church. Photo courtesy of Gloria Zuniga

“I learned about Green Together from Pacoima Beautiful. They are a trustworthy organization — I know they would never steer me in the wrong direction.”

GLORIA ZUNIGA

The savings won't end with that \$40,000. Zuniga anticipates significant savings on her energy bills — as much as \$200 per month, based on her first month of saving. The savings will enable her to catch up on some bills she is late on, and more. “With the long-term cost savings, I would like to invest in household projects, such as fixing part of the roof, painting the house and fixing up the living room flooring.”

Hoping to spread the wealth (and earn referral rewards from GRID Alternatives), Zuniga has recommended the solar installation program to other members of her community. One family she referred is partway through the process of having their roof inspected to have the panels installed.

PHILLIP MARTINEZ was born and raised in Pacoima, and he has lived there nearly all his life. He lives with his sister in a home he owns and works at Keck Hospital of USC.

Martinez' favorite part of living in Pacoima is the weather, although it has recently made his energy bills skyrocket. With the air conditioning set to a comfortable temperature, his bimonthly bills exceeded \$700 for two months in the summer of 2022. So, when a representative of GRID Alternatives knocked on his door to help him sign up for free TCC-funded solar panels on his roof, he took the opportunity to lower his future bills.

“My bill is a little high right now — like over \$700. It's because we're using air conditioning. It's been hot out here — in the hundreds.”

PHILLIP MARTINEZ

He was initially apprehensive about the program, knowing that some others in his community ended up paying monthly for solar. But when he had a chance to talk out the details on the phone with a GRID Alternatives staff member, he was reassured — they explained that the panels would be 100 percent free to him and would only save him money. In the first two months that the solar panels were installed and turned on, Martinez's bimonthly bill was less than half of what it would have been without them.

Now that he trusts GRID Alternatives about the cost (or lack thereof), Martinez has recommended the solar installations to people he knows in the community. Getting others on board will not only help GRID Alternatives to reach its TCC goals, but it also will earn Martinez some extra cash from referral incentives. He noticed that his neighbors, like him, are often initially skeptical that the solar panels are free.

Not everyone jumps at the opportunity, though — some are already too far into paid solar contracts with other companies, and some simply don't trust that the panels will be free. “I told them that I successfully got the solar panels installed, and I haven't had a single bill to pay.”

“GRID Alternatives does not immediately ask for a credit check or a down payment like other companies. It's a testament that they will not charge you at all.”

GLORIA ZUNIGA

“Some people are like, I'm not sure about that, that it's free. They're hesitant. But some have said they would check it out.”

PHILLIP MARTINEZ

In fact, even the upgrades needed on his recently installed roof were covered. GRID Alternatives took care of everything, getting the roof ready and the solar panels installed over the course of a few months and working with the housing inspector when the project hit a snag, so that Martinez wouldn't have to.

More upgrades are in Martinez's future: He has plans for the money he anticipates saving on his energy bills. It will help pay for some bathroom repairs, better insulation in his attic and improvements to the outside of his home, including fixing the fence around the house.

Building a green workforce

BACKGROUND

This case study explores how TCC dollars have helped Pacoima residents advance their career goals. The Los Angeles Conservation Corps offers paid work experience, on-the-job training, and federal, state, and industry recognized certifications. For more information about related projects, [page 43](#) covers the larger Workforce Development Plan and [page 56](#) summarizes the Urban and Community Forestry Project.

Interviews for this story were conducted in September and October 2021.

Corps members tie off a newly planted tree to provide added stability as it puts down roots in Pacoima in 2021. Photo credit: Los Angeles Conservation Corps

DULCE ROSALES is 23 years old and lives in Pacoima with her 4-year-old son. She is part of the LA Conservation Corps (LACC), which offers paid work experience, educational opportunities, support services, and job skills training for young people working on the TCC-funded Street Tree Planting project.

As a resident of Pacoima since 2016, Rosales has firsthand experience knowing that her community lacks the abundance of shade trees found in other more leafy, affluent parts of Los Angeles. She sees tangible impacts stemming from her work as a LACC Corpsmember: “The trees we plant through the TCC project will really cool down the city.”

Seeing the benefits of her work in the neighborhood makes the job very fulfilling. “It’s not just something I’m doing 9 to 5 to make money,” she says. “It’s affecting my community directly. That’s what I love about it and why I’m sticking with it.”

Before joining LACC, Rosales reported struggling to find satisfying work because she felt that she lacked experience and skills. The program brought her out of her comfort zone while building her resume and skills in everything from how to wield a shovel and Weedwacker to communications and writing skills, for instance.

Photo credit: Los Angeles Conservation Corps

Rosales says that LACC’s resources gave her the confidence and flexibility to go to school and work. Rosales is now also enrolled in a medical phlebotomy program to further her goal of supporting the health of her neighbors.

“My job is not just something I’m doing 9 to 5 to make money. It’s affecting my community directly. That’s what I love about it and why I’m sticking with it.”

DULCE ROSALES

Photo credit: Los Angeles Conservation Corps

JAVIER HURTADO is 23 years old and has lived with family in a close-knit neighborhood of Pacoima for 12 years. In high school, Hurtado struggled to manage work and school, and he chose to prioritize work. But without a high school diploma, he found his job options limited. Joining LACC’s job training program provided several opportunities.

“When the pandemic started, it was really hard to find work. LACC scheduled me for an interview the same week that I contacted them about a job. The staff helped me throughout the whole application, interview, and orientation process.”

Hurtado has since completed LACC’s extensive horticultural training, which covers site selection, planting, and caring for new trees. Hurtado works on a team of four, and together they plant roughly eight trees a day. Hurtado estimates that he has personally planted more than 100 trees in his year with the program.

Hurtado reports that the work with LACC gives him far more satisfaction than his previous role at a fast food restaurant. The camaraderie and respect on his team were a welcome change. He also reports getting positive feedback about the program from community members who ask, “Are you going to plant more? Can we get more trees?”

In addition to better working conditions, LACC helped Hurtado achieve one of his long-standing goals – to get his GED. “I’m trying to get as much out of this training as I can,” says Hurtado. “I already got several certifications. Next I want to get my driver’s license and earn a solar installation certification.”

Since this interview, Hurtado has been hired by the California Conservation Corps and is doing work in Lake Tahoe.

“When we’re out working, community members ask if they can get more trees”

JAVIER HURTADO

Clean air ambassadors use data to advocate for healthy air

BACKGROUND

This case study demonstrates how Green Together’s strategy for community engagement leverages Pacoima Beautiful’s existing programs like the Youth United Towards Environmental Protection (YUTEP) club described on the next page. The approach has empowered resident leaders to take on greater roles of public influence by strengthening their communication skills, climate literacy, and relationships with projects partners.

Interviews for this story were conducted in August and September 2021.

Pacoima Beautiful’s inaugural class of Clean Air Ambassadors, 2021. Photo credit: Pacoima Beautiful

HUONG TRAN attends high school with her friends in Sun Valley and is an active member of Pacoima Beautiful’s Youth United Towards Environmental Protection (YUTEP) club. Through YUTEP, Huong serves as a paid Junior Field Manager as well as a volunteer for Pacoima Beautiful’s COVID-19 vaccine program and community greening activities. Huong learned about the Clean Air Ambassador program from YUTEP. Her curiosity to learn about ways to help the community motivated her to participate in the Clean Air Ambassadors training.

Through the training, she collected air quality data in Panorama City and compared her data to that from Pacoima, Sun Valley, and North Hollywood. “I didn’t know how bad the air quality was and I wanted to know more about how I could help because I know air quality can affect your health just as bad as smoking,” said Huong. As a Clean Ambassador, she now understands the basics of air quality and its impact on community health. Huong credits the program with teaching her about technologies to monitor air quality, how to analyze data and communicate her results, and ways to improve her public speaking skills. While COVID-19 made it difficult to interact with other participants, she developed a deeper relationship and trust with Pacoima Beautiful staff and feels more tied to the organization. Huong plans to be a psychologist or nurse and continue to be involved in environmental projects as a hobby.

Huong Tran, picks up her air quality monitoring tools before beginning the Clean air ambassador program.

Photo credit: Pacoima Beautiful

“I didn’t know how bad the air quality was and I wanted to know more about how I could help because I know air quality can affect your health just as bad as smoking.”

HUONG TRAN

Jenifer Fonseca walking through Pacoima with an air quality instrument hooked to her waist. Photo credit: Jenifer Fonseca

JENIFER FONSECA is a high school student in Sun Valley who is completing her senior community service with Pacoima Beautiful's Youth United Towards Environmental Protection club (YUTEP). Launched in 2002, students from local middle and high schools are recruited to participate in the youth group. The youth meet weekly to increase awareness of environmental issues, participate in public service projects, develop leadership skills, and prepare for

college. Jenifer first learned about the Clear Air Ambassador program from YUTEP.

Jenifer completed the Clean Air Ambassador program by collecting air quality data in North Hollywood. She acquired analytical skills to compare and contrast pollution levels in North Hollywood, Panorama City, Pacoima, and Sun Valley. Jenifer identified air quality disparities between the neighborhoods, with North Hollywood having fewer spikes in particulate matter. As an Ambassador, she feels equipped to use data to convey the air pollution challenges the community is facing. She also enjoyed the intergenerational learning and community-building opportunities offered by the program. Jenifer aspires to attend UCLA and become a neonatal nurse. She is excited to add her new skills in data collection and analysis, creating presentations, and public speaking to her resume.

“Data is key to getting our point across about air quality issues in the community.... The air monitoring made me open my eyes. I didn't know about how bad air quality is in Pacoima and Sun Valley.”

JENIFER FONSECA

OSCAR BARCENA was born and raised in Pacoima to parents who emigrated to the neighborhood in search of a better life. During high school, Oscar participated in Pacoima Beautiful's youth leadership program. The program introduced him to the environmental justice issues affecting the Northeast San Fernando Valley. Working with other youth leaders to propose solutions, Oscar became aware of the importance of community learning and the capacity to advocate for a healthier community.

“There's a lot of environmental issues and projects that we don't ever see or know about. Becoming a Clean Air Ambassador was my way to have that veil lifted.”

OSCAR BARCENA

Years later, Oscar, who holds a master's degree in business administration and works for LA Metro, was inspired to become a Clean Air Ambassador. He is part of the inaugural cohort of Green Together's Community Academia also developed by Pacoima Beautiful. The Ambassador program is an innovative part of the TCC Community Engagement Plan that recruits and equips residents to advocate for a healthier community. Ambassadors meet for 13 sessions

Oscar Barcena exercising near Hansen Dam in Pacoima. Photo credit: Oscar Barcena

and are trained to use scientific equipment to measure particulate matter pollution in the TCC area and surrounding neighborhoods. They learn to interpret the data, communicate about air quality, and advocate for data-informed clean air solutions. The most important elements of the program for Oscar are the relationships developed with other residents and Pacoima Beautiful staff, the opportunity to learn more about health issues confronting Pacoima, and the possibility of influencing other local projects.

Climate planning and community engagement from the ground up

Pacoima Beautiful's Community Inspectors in the community, 2019. Photo credit: Pacoima Beautiful

BACKGROUND

This case study spotlights how TCC funding has supported deep community engagement work in the Northeast San Fernando Valley. Specifically, the case study looks at the work of three individuals who are funded by TCC to serve as resident leaders. Maria Madrigal, Sofia Maldonado, and Victor Sanchez have built on their past work with Pacoima Beautiful to help implement the Community Engagement Plan, detailed on page 39.

Interviews for this story were conducted in March 2021.

MARIA MADRIGAL is a longtime Sun Valley resident turned resident leader. Maria has lived in the community for over 34 years and for the past three years she has been part of Pacoima Beautiful's Community Inspectors program. She joined the program to keep active during her retirement years and make a difference in her community. Through the program, Pacoima Beautiful recruits and equips residents to become community leaders and advocates for social change using a "train-the-trainer" model. Inspectors identify toxic sources of pollution, opportunities for beautification, and teach other community members. Inspectors played a critical role in the process for developing the TCC proposal.

"I have gone through the solar roof process. Once the neighbors see [the solar roof], I can inform them about the program."

MARIA MADRIGAL

Maria meets with other Community Inspectors once a week to discuss environmental issues in the community, engage in public service projects to raise environmental awareness, and develop leadership skills by creating and advocating for community-led solutions. As a response to COVID-19, Maria is learning to use new technologies, such

Maria Madrigal at the weekly Community Inspectors meeting discussing community priorities, 2017. Photo credit: Pacoima Beautiful

as video and web conferencing, to master different ways to engage with residents. She is also learning about solar energy, the benefits of solar roofs, and how to qualify for the TCC-funded rooftop solar installations. Using her new skills and social networks, Maria is excited to assist with implementing Green Together's Community Engagement Plan and outreach for the Solar Roofs project.

Sofia Maldonado at the monthly food swap in 2019 where she'll be sharing about TCC. Photo credit: UCLA Luskin Center for Innovation

“I explain the benefits of programs like solar training with other moms ... to encourage their children to take advantage of these trainings because it has benefited my son”

SOFIA MALDONADO

VICTOR SANCHEZ is part of Pacoima Beautiful's Youth United Towards Environmental Protection (YUTEP) environmental club, launched in 2002. Students from local middle and high schools are recruited through student campus-based clubs to participate in the program. The youth meet weekly to increase awareness of environmental issues, participate in public service projects, develop leadership skills and prepare for college. As with the Community Inspectors program, participants in YUTEP become core leaders of the organization and community engagement efforts and will play a key role in Green Together's community outreach activities.

Victor joined the YUTEP in ninth grade. Now in high school, age 16, he has developed the confidence to speak at public meetings, organize, and lead community meetings and engagement efforts. By participating in paid internship opportunities such as the Future Rangers Program and certification courses like the California Naturalist training, Victor has decided to pursue a career in the sciences and hopes to design electric cars and to promote clean energy. He looks forward to new and rewarding opportunities to involve the community in TCC engagement efforts, making good connections, and seeing what the community can accomplish together.

Victor Sanchez at John Francis High School during community engagement event, August 2019. Photo credit: Pacoima Beautiful

“As an environmentalist, I like seeing my community contributing to resolve issues around climate and the environment. I like the community pride.... We make projects our own and have a sense of community.”

VICTOR SANCHEZ

PROFILES: TRANSFORMATIVE PLANS

Second cohort of Clean Air Ambassadors celebration ceremony. June 2022. Photo credit: @greentogethercollab on instagram

THE COUPLING OF TRANSFORMATIVE PLANS alongside GHG-reduction projects is one of the central elements of the TCC that separates it from all other California Climate Investments. For Round 2 of TCC, applicants were required to develop three transformative plans: a community engagement plan, workforce development plan, and displacement avoidance plan. Together, these three plans are designed to ensure that TCC investments reflect the community’s vision and goals, bring economic opportunities to disadvantaged and low-income communities, and minimize the risk of gentrification and displacement of existing residents and businesses. Applicants were provided a menu of strategies for developing their plans and encouraged to choose those that spoke to the site’s priorities and strengths. The following section provides an overview of how Green Together structured its three transformative plans and what progress has been made towards plan implementation.

Community Engagement Plan

Clean Air Ambassadors collecting field data. June 2022. Photo credit: Pacoima Beautiful

NORTHEAST SAN FERNANDO VALLEY YOUTH, RESIDENTS, AND BUSINESSES are involved in various aspects of the planning, implementation, and governance of Green Together and the initiative’s various projects supported by the TCC grant. The Community Engagement Plan (CEP) leverages two decades of community-led planning efforts ushered by Pacoima Beautiful, one of Green Together’s lead grantees. The many partnerships formed between Pacoima Beautiful, local nonprofits, project area residents, and business leaders through a variety of planning and visioning efforts began in 2007 and resulted in the Pacoima Wash Vision Plan and the Pacoima Urban Greening Plan. This represents a decade of meetings, neighborhood canvassing, mobile charettes, site visits, and relationship building specifically to identify, describe, and strategize about the community’s needs to inform future planning efforts such as TCC Green Together. Pacoima Beautiful will collaborate closely with Green Together partners to lead engagement efforts across all projects and the transformative plans. The new Green Together Resource Center and a new website will serve as the hubs of information and activity encompassing all aspects of the TCC project. The Green Together CEP has two components, one focused on general engagement for all TCC activities and a second related to climate change education.

Recent Accomplishments*

- » 5 community events where Green Together project partners promoted their programs
- » 288 individuals engaged through door-to-door outreach efforts
- » 15 clean air ambassadors completed the program, including both youth and adult participants
- » There were 5 FiT workshops, both in person and virtually

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

General Engagement Strategy

Green Together’s general strategy for engagement across all TCC activities includes a layered approach:

1. Utilize a team of dedicated staff organizers, volunteer community inspectors, and youth organizers, to engage and inform stakeholders and residents;
2. Focused outreach on hard-to-reach residents by making meetings ADA accessible, providing Spanish translation, hosting during a range of hours that work best for the community, and by offering child care;
3. Facilitate community participation by prioritizing interactive engagement, including charettes, door-to-door knocking, and surveys; and dotmacracy and social media to reach residents;
4. Engage residents through traditional public workshops and meetings, and leverage existing community meetings, such as public school parent centers.

Climate Education Engagement

Green Together will offer climate change education via two approaches:

1. Community survey data collection and education workshops on air quality and temperature monitoring with faculty experts at the University of Southern California;
2. Education on solar technologies, including solarthons and webinars focused on developing a feed-in tariff program for multi-family units (FIT) led by the Los Angeles Business Council.

Governance Model

Green Together has established a collaborative model to provide oversight of the implementation of the TCC grant. The governance model includes three components:

3. Green Together Steering Committee is responsible for implementation of all activities and is convened monthly by the grantee, Community Partners. The committee reserves a permanent seat for Pacoima Beautiful, which supports all outreach efforts, as well as one rotating seat that each partner holds for one year (see **Appendix 3, page 75**, for a list of partners);
4. Leadership Council will provide input on all aspects of the implementation process. Members will include two neighborhood residents, two local business owners, two nonprofit organizations, two anchor institutions, two community leaders, and a local elected official. The Council will be convened on a quarterly basis by Pacoima Beautiful.
5. Displacement Avoidance Plan (DAP) Committee will comprise two task-forces, one focused on housing and another on businesses. The task forces will convene stakeholders, academic experts, elected officials, local government agencies, and residents biannually and convene together as a committee annually.

Community Engagement Plan

Project Details

- » Launch date: May 2020
- » Anticipated completion date: March 2025
- » Project leads: Pacoima Beautiful and Los Angeles Business Council
- » TCC grant funds: \$2,359,002
- » Leveraged funds: \$0

Cumulative Progress Through FY 2021-2022

- » Two rounds of the Clean Air Ambassador program with a total of 28 participants completing the program. The curriculum focuses on air quality impacts on human health. **Appendix 1, page 71**, highlights air quality monitoring map.
- » 7 community events hosted by Green Together Collaborative in both English and Spanish.
- » About 464 residents and 30 businesses have been engaged through door-to-door outreach in both English and Spanish.
- » 247 residents engaged through phone outreach efforts in both English and Spanish.
- » 7 Feed-in-Tariff workshops hosted by LABC in-person and virtually, with over 400 total participants.

Displacement Avoidance Plan

Types of accessory dwelling units identified by UCLA research in June 2019, highlighting the importance of this culturally relevant affordable housing option in the community. Photo credit: Cate Carlson, Thomson Dryjanski and Michael Peterson, UCLA

GREEN TOGETHER'S DISPLACEMENT AVOIDANCE PLAN (DAP) weaves together a number of strategies toward the dual purpose of protecting and encouraging a growth in the supply of culturally relevant affordable housing in the TCC project area, as well as protecting the tenure of residents and small businesses already located in the community. These strategies include extensive community-based research to understand the short and longer-term needs of local residents and businesses in order to offer targeted workshops, trainings, and other resources. Research from UCLA has identified that the TCC project area is vulnerable to residential and commercial gentrification. The approaches outlined in the DAP are aimed at addressing the indirect effects of TCC investment that may lead to displacement by raising the value of residential and commercial land. It is important to note that none of the Green Together's TCC-funded activities will directly cause residential or business displacement as activities will occur within the public right-of-way. However, the East San Fernando Valley Transit Corridor leveraged project will partially or fully acquire a handful of residential and commercial properties in the area. DAP activities will be held at the Green Together Resource Center developed as part of the Workforce Development Plan.

Recent Accomplishments*

- » A total of 10 workshops held to address the business needs of artists. Artists chose the topics and themes for the workshops
- » 5,000 individuals were invited to participate in business needs of artists workshops through flyer distribution, posters, social media, and street murals
- » 225 individuals engaged at workshops relating to business needs of artists

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

The Green Together DAP is led by Pacoima Beautiful in consultation with expert economic development consultants, researchers at the UCLA Center for Neighborhood Knowledge, and faculty at the UCLA Department of Urban Planning. The DAP also incorporates extensive community engagement, a train-the-trainer approach to resource delivery, and a stakeholder engagement process through a DAC Advisory Committee. Pacoima Beautiful uses the train-the-trainer model to build community capacity to advocate for planning and policy change.

Residential Anti-Displacement

The following studies were completed to help support Displacement Avoidance Plan goals:

1. To promote the production and protection of affordable housing options, Green Together will conduct a Community Land Trust (CLT) feasibility study to gauge community interest in this form of land tenure;
2. To promote the production and protection of affordable housing options, the DAP includes data gathering activities on the prevalence of accessory dwelling units (ADUs) in the project site to inform the development of a legalization action plan;
3. To help protect the tenure of existing residents, the Green Together will monitor gentrification in the project site, as well as conduct surveys and focus groups to understand tenant/landlord relationship. These activi-

ties will inform the design and implementation of culturally relevant tenant protection support services such as legal “charlas” (talks) and tenant rights workshops.

Business Anti-Displacement

To protect small businesses from displacement, Green Together will implement the following three policies:

1. Conduct research to create an inventory of small business development programs available to local businesses as well as door-to-door surveys to understand the needs and challenges facing businesses in the project area;
2. Increase the visibility of small business assistance programs by hosting annual business workshops on financial assistance, state environmental compliance, commercial tenant protection rights, and Metro’s business interruption;
3. Support alternative business models through creative capital to further strengthen local artists and the visual voice of the community. The DAP will do the following:
 - a) Identify creative capital, professional development, and technical assistance opportunities for the local artist community;
 - b) develop a weekend technical assistance workshop;
 - c) host technical assistance workshop focused on the business needs of the artist community;
 - d) Provide referral support and follow-up to artist that participate in workshop.

Displacement Avoidance Plan

Project Details

- » Launch date: January 2019
- » Anticipated completion date: March 2025
- » Project lead: Pacoima Beautiful
- » TCC grant funds: \$0
- » Leveraged funds: \$305,706

Cumulative Progress Through FY 2021-2022

- » 30 surveys collected to assess business needs and concerns about displacement.
- » Pacoima Beautiful and SAJE worked in collaboration to present three workshops in Spanish for community members to learn about Eviction Process per city’s Just Cause for Eviction Ordinance, Rent Stabilization Ordinance, and legal definition of Healthy Homes.
- » Collaborated with Getty Museum to create a two-day event that celebrated local artists and Getty’s 25th anniversary. This resulted in 10 workshops in the project area to address the business needs of artists.
- » Conducted ADU study on prevalence and challenges of owning and living in ADUs, including community survey of 96 residents, one in-depth case study, one focus group with four youth, six interviews with tenants and four financing experts, and 196 visual observations.

Responses to COVID-19

- » All in-person events moved to virtual environments after May 2020 stay-at-home order was issued.

Workforce Development Plan

GRID Alternatives solar installation trainee. Photo credit: GRID Los Angeles

GREEN TOGETHER'S WORKFORCE DEVELOPMENT PLAN (WDP) identified four workforce development program goals for project area and nearby residents: (1) increase social equity and economic opportunities; (2) create high-quality jobs that lead to permanent career pathways; (3) foster inclusive economic development for workers, businesses and local economy through a robust business retention and enhancement of the Clean-up Green-up Initiative, a local ordinance aimed at lessening cumulative health impacts from incompatible land uses in communities affected by a concentration of environmental hazards; and (4) support equity and opportunity by engaging with the DAP business task force activities, when appropriate. To achieve these goals, Green Together will develop a workforce development program in the project area that connects residents of Pacoima and Sun Valley with a job training and employment opportunities with clear pathway for high-quality jobs in the green building and solar industries. The skills gained by participants will prepare them for jobs in solar panel installation and energy auditing, as well as provide a foundation for jobs in the manufacturing and recycling sectors.

Recent Accomplishments*

- » 11 participants completed the GRID Alternatives' solar training program, of which 8 were hired by GRID Alternatives and other solar-related companies
- » A total of 7 participants completed training with LACC, for a total of 122 hours per trainee

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Workforce Development Strategy

GRID Alternatives Greater Los Angeles and the L.A. Conservation Corps will oversee the workforce development program activities in the project area, with targeted outreach assistance from Pacoima Beautiful. Through this program at least 146 community members will receive training and job placement support through two opportunities:

1. LACC will offer paid work experience on urban forestry project followed by brownfields remediation job skills training that will result in 50 opportunity youth program participants receiving federal, state, and industry recognized certifications. Youth will receive paid work experience and on-the-job training for TCC-funded Street Tree Planting and Pedestrian Mobility projects.
2. GRID Alternatives will recruit at least 96 adults from the project or nearby area to receive a solar installation basics training, targeting women, veterans, and justice-involved reentry residents. Industry recognized certification will be provided to participants that complete the program. Participants will receive job training through the TCC-funded Single-Family Solar Installations project.

Targeted Recruitment Strategy

GRID's and LACC's targeted recruitment strategy focuses on low-income residents, women, veterans, reentry citizens, youth, and residents who may be impacted by project development. The recruitment strategy benefits from long-standing relationships with community groups, such as Pacoima Beautiful, public agencies that provide referrals,

connections with vocational training schools and community colleges, and veteran, youth and reentry-focused organizations. Between 30% and 40% of youth trainees in LACC's program will be residents from the project area. A minimum of 60% of trainees in GRID's solar training program will be residents from the project area.

Strategy for Job Placement

To ensure that existing workforce programs and new TCC workforce opportunities reach residents of the TCC project area specifically, the WDP will rely on three strategies:

1. Use leveraged funds to create a Green Together Resource Center. The Resource Center will be a staffed one-stop-shop near a major commercial corridor in Pacoima and serve as the hub for residents to learn about training, recruitment, and job opportunities on TCC-funded projects.
2. All participants who complete the training will receive tool kits and belt at completion ceremony, job search support, including leads, resume building, interview coaching, and interview clothes (leveraged) through the Resiliency Center.
3. Program completers will be connected with partner employers through hiring days and two career fairs organized by GRID, as well as the local Work Source Center, and through partnerships with a local staffing agency, a local union, contractors working on large-scale projects, and the City of LA Personnel Department to place graduates in city jobs.

Workforce Development Plan

Project Details*

- » Launch date: May 2020
- » Anticipated completion date: March 2025
- » Project leads: GRID Alternatives and LACC
- » TCC grant funds: \$686,820
- » Leveraged funds: \$0

Cumulative Progress Through FY 2021-2022

- » 7 events held in the project area where job training programs are announced
- » 12 individuals secured a job through a job placement opportunity (5 GRID Alternatives and 7 LACC graduates).
- » 22 individuals completed job training (15 with GRID Alternatives and 7 with LACC).

Responses to COVID-19

- » All in-person events moved to virtual environments after May 2020 stay-at-home order was issued.

*As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

GRID Alternatives staff speaking to a resident about their options to install solar at the Solarthon event. June 2022. Photo credit: Pacoima Beautiful

TCC APPLICANTS CHOSE FROM A WIDE ARRAY OF PROJECT TYPES in their effort to achieve the three objectives of TCC, namely: (1) reductions in GHG emissions; (2) improvements in public health and environmental benefits, and (3) expanded economic opportunity and shared prosperity. These project types align with the suite of California Climate Investments overseen by various state agencies.** This alignment was built into TCC to streamline the proposal and indicator tracking process. For example, the California Air Resources Board (CARB) has developed GHG-reduction quantification methodologies and co-benefit assessment methodologies for each project type under the existing suite of California Climate Investments. These methodologies can then be used by TCC grantees (and technical assistance providers, such as the UCLA evaluation team) to estimate the benefits of each project. The following section provides an overview of the Green Together projects, aggregated by project type, that will be using TCC dollars to achieve the aims of the program.

**For more information about California Climate Investments, visits: <http://www.caclimateinvestments.ca.gov/>

Active Transportation Project

Trust for Public Land staff presenting for community members at the Parks & Mobility Charrette. October 2021 . Photo credit: Pacoima Beautiful

THE ACTIVE TRANSPORTATION PROJECT, known locally as the Pedestrian Mobility Improvement Project, aims to reduce vehicle miles traveled (VMT) in passenger vehicles by improving mobility options for pedestrians, bicyclists, and transit riders to access key destinations in and outside the TCC project area. The project is led by the Trust for Public Land (TPL) and will focus on pedestrian improvements. The project will install critical pedestrian infrastructure on 2.4 miles of northeast-southeast residential streets Herrick and Haddon avenues, located between the Van Nuys business district and the future Pacoima Wash Greenway. The streets will provide a slow, locally serving network facilitating safe and attractive connections between homes, schools, parks, shopping and local employment centers. Pacoima Beautiful will assist TPL in soliciting community feedback on designs. Trees will be planted in coordination with the Street Tree Planting project.

Recent Accomplishments*

- » Gathered community feedback at four different community events with total 95 participants in attendance
- » 1,000 flyers distributed to stakeholders in both English and Spanish

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

A stretch of Herrick Ave was chosen for pedestrian improvements because it passes by six schools, the David M. Gonzales Park funded project and the Van Nuys Boulevard business district, and provides an important link across the Pacoima Wash to the City of San Fernando. It is also a popular route for residents of San Fernando Gardens, a large multi-family public housing complex located nearby. Specifically, the Pedestrian Mobility Improvement Project includes the following upgrades along the 2.4 miles of streets that are part of these mobility hubs:

- » 900 feet of new sidewalks as well as 5 way-finding signs, 10 ADA ramps for individuals with limited mobility, 3 high visibility crosswalks;
- » Site amenities at the mobility hubs also include improved signage, 4 bike parking areas, 5 areas for seating, and 3 public art murals; and
- » EV charging infrastructure.

Other estimated co-benefits over the project lifetime are detailed below.

Pedestrian Mobility Improvements

Project Details*

- » **Launch date:** May 2020
- » **Anticipated completion date:** April 2025
- » **Project lifetime:** 20 years
- » **TCC grant fund:** \$3,822,067
- » **Leveraged funds:** \$0
- » **Project lead:** Trust for Public Land

Estimated Lifetime Benefits**

- » **GHG emissions reductions:** 47 MTCO₂e
- » **VMT Reductions:** 121,557 miles
- » **Travel cost savings:** \$70,503
- » **Direct jobs from TCC dollars:** 17 FTE
- » **Indirect jobs from TCC dollars:** 7 FTE
- » **Induced jobs from TCC dollars:** 13 FTE

Cumulative Progress Through FY 2021-2022

- » 4 community events hosted by Green Together Collaborative where community feedback was received in both English and Spanish.
- » 113 individuals provided commentary or input for project implementation.
- » About 1,000 printed flyers were distributed to local residents and schools to promote events.
- » 32,807 posts made on social media platforms like Instagram, Facebook, and Twitter to promote events

Responses to COVID-19

- » First in-person meeting was held outdoors with social distancing and face mask requirements.
- » COVID reduced staff capacity at the Los Angeles City Recreation and Parks Department, leading to a delayed approval of park sites as viable locations for EV charging stations.

* As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

** Estimated benefits were based on original anticipated project outcomes and will be updated at the conclusion of the evaluation to reflect actual project outcomes.

Transit Operations

Community members test-riding DASH electric bus at Prende el Sol Green Together Event in September 2021. Photo credit: Pacoima Beautiful

GREEN TOGETHER’S TRANSIT OPERATIONS PROJECT, known locally as the Pacoima DASH E-Bus Project, leverages TCC funds and other public dollars to electrify the DASH bus fleet that travels through the Pacoima neighborhood in the project area. The project lead is the City of Los Angeles Department of Transportation (LADOT), with community outreach support from Pacoima Beautiful. The DASH bus is a frequent, inexpensive, and convenient bus service designed to connect Los Angeles neighborhoods to regional services, but the program has historically undeserved the Pacoima area. In addition to electrification of current buses, the project installs electric vehicle chargers and couples these investments with increased bus service through a new E-DASH bus route. The route was developed with community input and will connect higher-density residential areas with major shopping complexes, schools, and medical care facilities. LADOT projects the new route will increase DASH ridership by 90% in the project area.

Recent Accomplishments*

- » Production of buses by BYD Motors Inc.

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

It is important to note that the Pacoima DASH E-bus project will not impact fare structures. The investment is aimed at improving transit ridership and reducing vehicle miles traveled (VMT) with transit routes that better respond to the community’s needs. The TCC funding will provide the incremental cost of upgrading from a compressed natural gas bus to a battery-electric bus achieving meaningful reduction in GHG emissions and improvement in air quality in this impacted community.

Specifically, Green Together’s Pacoima DASH E-bus Project includes the following:

- » 14 new battery-electric buses;
- » 7 electric chargers;
- » 1 new DASH E-Bus route servicing the Pacoima neighborhood; and
- » 45 new DASH E-Bus stops along the new route.

Other estimated co-benefits over the life of the project are detailed in the table below.

Pacoima DASH E-Bus

Project Details

- » **Launch date:** May 2020
- » **Anticipated completion date:** October 2024
- » **Project lifetime:** 12 years
- » **TCC grant funds:** \$2,513,000
- » **Leveraged funds:** \$9,912,000
- » **Project lead:** LA Department of Transportation

Estimated Lifetime Benefits

- » **GHG emissions reductions:** 18,070 MTCO₂e
- » **VMT reductions:** 18,051,441 miles
- » **Travel cost savings:** \$1,109,829
- » **Direct jobs from TCC dollars:** 6 FTE
- » **Indirect jobs from TCC dollars:** 3 FTE
- » **Induced jobs from TCC dollars:** 5 FTE

Cumulative Progress Through FY 2021-2022

- » LADOT underwent the bus procurement process, including selecting a manufacturer in the nearby Lancaster area, placing the order for the buses, and beginning the bus manufacturing process.

Responses to COVID-19

- » Due to COVID-19 restrictions, the Lancaster factory producing the buses was shut down. The factory is now operating but caused initial project delays.

Low-Carbon Transportation Project

The Electric Vehicle Charging Station project will install critical infrastructure at three mobility hubs. Source: NPR

GREEN TOGETHER'S LOW-CARBON TRANSPORTATION PROJECT,

referred to as the Electric Vehicle Charging Station project, will fill a critical mobility gap and will increase access to services and amenities without production of GHG emissions from tailpipe emissions. There is currently very limited EV charging infrastructure available to residents in the Green Together project area. Installing charging stations at centrally located intersections and business districts will ensure that the new chargers are visible and accessible to residents interested in using them for their own vehicles or future EV car-share mobility options. In doing so, the project is helping to break down barriers to car ownership and car-share programs and helping to ensure that EVs become a practical alternative in all neighborhoods regardless of socioeconomic class. The EV Charging Station project is led by the Trust for Public Land (TPL) with community engagement support from Pacoima Beautiful. TPL will implement the EV charging infrastructure at three mobility hubs to facilitate convenient, safe, and attractive active and alternative transportation options near community

Recent Accomplishments*

- » During community engagement events, community input voted top locations for EV chargers, which include parks, schools, and library
- » A total of six meetings were held with key stakeholders, which include the Mayor's Office, LA Recreation and Parks, LA County Library, Shell Recharge, GRID Alternatives, and LA Bureau of Street Lighting

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

resources.

Each mobility hub will have four EV chargers, for a total of 12 chargers going into the project area.

Currently, the mobility hubs are planned for the LA County Library in Pacoima and in two parking lots at Ritchie Valens Park (one near the recreation center and one near the pool). The location of these sites were selected based on community input gathered throughout various engagement events held in the project area. In addition to the feasibility of working with City of Los Angeles' publicly

owned infrastructure, GRID Alternatives Greater Los Angeles, a lead partner for other TCC projects, will manage the installation of the EV chargers.

While new EV infrastructure will increase clean mobility options without production of GHG emissions from tailpipe emissions, there is not an established methodology for estimating GHG sequestration benefits in urban environments, VMT reductions, or travel cost savings. As such, these benefits are not included in estimates reported below.

Electric Vehicle Charging Stations

Project Details*

- » **Launch date:** May 2020
- » **Anticipated completion date:** February 2025
- » **Project lifetime:** 3+ years
- » **TCC grant funds:** \$459,173
- » **Leveraged funds:** \$0
- » **Project lead:** The Trust for Public Land

Estimated Lifetime Benefits**

- » **Induced jobs from TCC dollars:** 2 FTE

Cumulative Progress Through FY 2021-2022

- » 104 individuals provided commentary or input on the implementation of EVCS at 3 different community engagement events hosted by Green Together Collaborative.
- » 11 meetings held with key stakeholders such as City of Los Angeles Mayor's Office, LA County Library, Recreation and Parks Department, Bureau of Street Lighting, Shell Recharge, and GRID Alternatives.
- » 1,000 individuals engaged through door-to-door outreach and printed materials.

Responses to COVID-19

- » First in-person meeting was held outdoors with social distancing and face mask requirements.
- » Reduced staffing in city departments has slowed the formation of the partnerships needed to install chargers on public property.
- » COVID reduced staff capacity at the City of Los Angeles Department of Recreation and Parks, leading to a delayed approval of park sites as viable locations for EV charging stations.

* As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

** Estimated benefits were based on original anticipated project outcomes and will be updated at the conclusion of the evaluation to reflect actual project outcomes.

Rooftop Solar Project

Pacoima house with solar panels installed by GRID Alternatives during Solarthon in June 2022. Photo credit: GRID Alternatives

GREEN TOGETHER'S SOLAR PROJECT, referred to as the Single-Family Solar Photovoltaic Installations Project, will enhance the generation of local renewable energy and lower energy costs for property owners by installing 669 kW of photovoltaic systems on 175 single-family homes in the project area. Installations will be coupled with leveraged weatherization services to address the projected increase in extreme heat days in the project area and community concerns raised during the grant engagement process regarding lack of proper ventilation and air conditioning in many homes. The project is led by GRID Alternatives Greater Los Angeles, a nonprofit organization that installs solar power systems and provides job training for undeserved communities. The installation project is also part of Green Together's Workforce Development Plan (WDP) training activities aimed at creating a pipeline of green local jobs and a thriving workforce in the Northeast Valley. As part of the WDP, the solar project will provide on-the-job training for at least 96 residents to participate in foundational career training in solar panel installation, energy auditing, manufacturing and recycling sectors.

Recent Accomplishments*

- » A total of six solar photovoltaic installations were completed, for a total of 18.5 kW of new solar PV capacity
- » 11 individuals were trained on solar PV maintenance
- » The first Green Together Collaborative Solarthon was held on June 2022. GRID staff and Green Together project partners talked to community members to educate them on solar rooftop projects and other initiatives

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

The solar photovoltaic systems will be provided at no cost to homeowners nor will liens be placed on the property. Current homeowners may transfer the solar rooftops if they sell their home, without cost to future owners. GRID Alternatives will also conduct a post-installation training session within three months of install for all homeowners who receive solar. They will be provided additional information about their system, their new energy bills, and important phone numbers in case there is a problem with the system. Homeowners will also be asked for referrals to

others residents who may be interested.

The average cost per system is roughly \$20,000, with an average DC rating (system size) of 3.7 kW, average AC rating (system size) of 3.2 kW, and an average lifetime client savings of \$34,532. Homeowners can expect to save 50%–90% on their energy bill. Other project co-benefits are detailed in the table below. To learn more about Rooftop Solar Project beneficiaries, please visit **page 30**, “Stories from the Community.”

Single-Family Solar Photovoltaic Installations

Project Details

- » **Launch date:** May 2020
- » **Anticipated completion date:** April 2025
- » **Project lifetime:** 30 years
- » **TCC grant funds:** \$4,702,495
- » **Leveraged funds:** \$111,350
- » **Project lead:** GRID Alternatives

Estimated Lifetime Benefits

- » **GHG emissions reductions:** 9,074 MTCO₂e
- » **Renewable energy generation:** 29,859,008 kWh
- » **Energy cost savings:** \$3,989,163
- » **Direct jobs from TCC dollars:** 22 FTE
- » **Indirect jobs from TCC dollars:** 11 FTE
- » **Induced jobs from TCC dollars:** 16 FTE

Cumulative Progress Through FY 2021-2022

- » 57 site visits made for a total of 7 installations completed with 23.8 kW of solar capacity.
- » 11 individuals trained on solar PV maintenance.
- » Hosted first Solarthon and attended four community engagement events hosted by Green Together Collaborative.
- » 50 properties visited through door-to-door outreach.
- » GRID Alternatives received leverage funds to provide re-roofing services for Northeast Valley homeowners who access no-cost solar systems.

Responses to COVID-19

- » Due to COVID-19, the GRID Alternatives Greater Los Angeles office temporarily closed its doors to the public.
- » Transitioned from in-person workforce trainings to online or hybrid trainings
- » Extensive changes to client interactions have been made to meet public health guidelines, such as hosting virtual engagement activities.

Urban Greening Project

Community members voting for park design at Parks & Mobility Charrette at David M. Gonzales Park in October 2021. Photo credit: Pacoima Beautiful

GREEN TOGETHER'S URBAN GREENING PROJECT will be led by Trust for Public Land (TPL) and will focus on the renovation of David M. Gonzales Park and Recreation Center, a 6.8-acre neighborhood park at an intersection that serves roughly 11,000 residents within a 10-minute walk. The park will receive retrofits that make it more useful to the community and more adaptable to the impacts of climate change by renovating the park to mimic natural ecosystem and cooling microclimates. Project enhancements include the addition of 60 shade trees, landscaped areas with drought-tolerant and California native plants, a nature trail through a Native Plant Demonstration Garden, picnic tables, walking paths, and new interpretive signage. In addition to cooling benefits, the project will reduce flooding, improve water quality and regional water security, and promote biodiversity. To achieve these aims, the project will incorporate over 71,000 square feet of green infrastructure elements and best management practices that simulate a natural system's ability to capture, absorb, and filter stormwater and pollutants. For example, a bioswale will capture and infiltrate approximately 256 cubic feet of water. Other project co-benefits are detailed in the table below.

Recent Accomplishments*

- » Community members were able to vote for top park designs at various community events held throughout the fiscal year. A winning concept design was presented at Parks & Mobility Charrette
- » Currently working on MOA with LADWP to merge both Green Together's Project Improvements and LADWP's Stormwater Infiltration Project

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

The renovation of David M. Gonzales Park is a two-phase project. In the first phase, the Los Angeles Department of Water & Power (LADWP) will add sports field amenities and an infiltration gallery beneath the fields that will direct approximately 2.3 million gallons of water to the local aquifer. Phase 1 is funded by LADWP.

TCC will fund Phase 2 of the park renovation, which was detailed on the previous page. TPL is leading the complex

coordination between all the entities involved in implementation, including community outreach with Pacoima Beautiful, the City of LA Department of Recreation and Parks, and LADWP. TPL is coordinating with LADWP to ensure that the park renovation is completed on time.

Community engagement efforts for the park renovation project have been coupled with the electric vehicle charging stations project.

David M. Gonzalez Park Renovation

Project Details*

- » **Launch date:** May 2020
- » **Anticipated completion date:** March 2026
- » **Project lifetime:** 40 years
- » **TCC grant funds:** \$2,267,664
- » **Leveraged funds:** \$0
- » **Project lead:** Trust for Public Land

Estimated Lifetime Benefits**

- » **GHG emissions reductions:** 84 MTCO₂e
- » **Shade trees planted:** 60
- » **Direct jobs from TCC dollars:** 16 FTE
- » **Indirect jobs from TCC dollars:** 4 FTE
- » **Induced jobs from TCC dollars:** 10 FTE

Cumulative Progress Through FY 2021-2022

- » 3 community engagement events held and a survey conducted to receive community input
- » 81 stakeholders engaged at each meeting and event
- » Multiple meetings held with key stakeholders such as project partners at LADWP, City of Los Angeles, and Green Together Collaborative to move the project forward

Responses to COVID-19

- » First in-person meeting was held outdoors with social distancing and face mask requirements.

* As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

** Estimated benefits were based on original anticipated project outcomes and will be updated at the conclusion of the evaluation to reflect actual project outcomes.

Urban and Community Forestry Project

Alexis and Raul, two LACC trainees, planting street trees in the project area. Photo credit: LACC

GREEN TOGETHER'S URBAN AND COMMUNITY FORESTRY PROJECT

will complement other efforts throughout the neighborhood to increase resident access to tree coverage and open green space, reduce air conditioning usage and demand for electricity for cooling purposes. The project is coordinated by the Los Angeles Conservation Corps (LACC) with outreach support from Pacoima Beautiful. LACC is a local nonprofit that provides at-risk young adults (18-24 years) and school-aged youth with opportunities for success through job skills training, education, and work experience, with an emphasis on conservation and service projects that benefit the community. The Street Tree Planting project leverages TCC funds to plant and maintain 2,035 new trees, focusing on shade for commercial and residential properties usage.

As the trees mature, they will sequester carbon and shade nearby buildings. The additional tree coverage will also reduce the urban heat island effect on hot days and absorb stormwater on rainy days. LACC will coordinate community engagement activities with support from Pacoima Beautiful and will focus on two activities. First, raising awareness of the need for expanding the urban tree canopy, which will be accomplished by online and

Recent Accomplishments*

- » 201 trees planted in public space with low to no shade areas
- » 18,294 visits to planted trees for watering, maintenance, and monitoring
- » Gave away 106 Fruit Trees to residents who live within the project boundary
- » 21 trainings on tree establishment and maintenance with 53 stakeholders trained

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

face-to-face messaging. The Corpsmembers and Pacoima Beautiful’s Promotoras and youth community organizers will canvass residents and small business owners to secure permission to plant. They will also invite them to participate in the ongoing care of the trees.

The Street Tree Planting project is also part of the Green Together Workforce Development Plan (WDP) led by GRID Alternatives. Green Together’s WDP provides 50 paid on-the-job training opportunities in TCC tree planting activi-

ties for local youth who are interested in a career in urban forestry and brownfields remediation. The project will also coordinate with the TCC-funded renovation of the David M. Gonzalez Park and Recreation Center, which includes ecosystem enhancements such as the addition of 60 shade trees and other green infrastructure to provide cooling and other benefits to nearby residents.

Other co-benefits of the Street Planting urban and community forestry project are detailed in the table below.

Street Tree Planting

Project Details*

- » Launch date: May 2020
- » Anticipated completion date: February 2025
- » Project lifetime: 40 years
- » TCC grant funds: \$2,897,586
- » Leveraged funds: \$175,0000
- » Project lead: Los Angeles Conservation Corps

Estimated Lifetime Benefits**

- » GHG emissions reductions: 5,359 MTCO₂e
- » Trees planted: 2,035
- » Energy cost savings: \$216,091
- » Avoided Stormwater Runoff: 8,842,048 gallons
- » Direct jobs from TCC dollars: 31 FTE
- » Indirect jobs from TCC dollars: 6 FTE
- » Induced jobs from TCC dollars: 11 FTE

Cumulative Progress Through FY 2021-2022

- » 708 trees planted in low- to no-shade areas and provided 29,529 visits to all planted trees
- » 106 fruit trees given to residents who live within the project boundary
- » 53 individuals trained during 34 trainings on tree establishment and maintenance
- » Over 1,900 residences, 231 businesses, and 6 schools engaged through door-to-door outreach efforts

Responses to COVID-19

- » Due to COVID-19 economic climate, staff challenges led to trouble meeting project deliverables.

* As of April 2023, there has been an amendment to project deliverables. New changes will be reflected in the next fiscal year report.

** Estimated benefits were based on original anticipated project outcomes and will be updated at the conclusion of the evaluation to reflect actual project outcomes.

Child at Bradley Green Alley and Plaza. Photo credit: Pacoima Beautiful

LEVERAGED PROJECTS are those that further the goals of TCC investments and use entirely external sources of funding to help further their vision of TCC grantees. In the case of Green Together, there are six independently funded projects totaling more than \$38 million. These six leveraged projects include: (1) cool roof retrofits, (2) development of a Community Resiliency Center, (3) the renovation of Bradley Green Alley and Plaza, (4) engineering plans for the East San Fernando Valley Transit Corridor, (5) the development of a stormwater capture at Fernangeles Park, and (5) design and infrastructure of Green Streets. These projects include the planting of trees and plants, infrastructure to weather extreme heat events, stormwater capture and storage, and electric vehicle and charging infrastructure. The TCC grant will allow Green Together to augment existing community-driven and public efforts to create safer biking and walking infrastructure to increase multimodal travel options, create cooler conditions during extreme heat events, improve transit access, make electric vehicle and charging infrastructure accessible, and support regional efforts to supplement local water supplies. The following section provides an overview of the leveraged projects currently underway in the Northeast San Fernando Valley project area.

Cool Roof Retrofits

Single-family cool roof prototype that will be offered to Green Together project area residents free of charge. Photo credit: GRID Alternatives

THE COOL ROOF RETROFITS PROJECT is a decarbonized energy efficiency program that will reduce interior temperatures during periods of extreme heat and lower energy and utility costs. Installation of 35 cool roofs over the grant period on single-family residences receiving no-cost solar as part of the TCC-funded Solar Photovoltaics Project. Accessory dwelling units will also be eligible. Cool roof materials absorb less heat than standard roofing, thus reducing indoor temperatures during extreme heat events. According to CalAdapt data, extreme heat events are projected to increase in the area. During community engagement activities, residents raised concerns over the lack of proper ventilation and air conditioning. Retrofitting homes with cool roofs and providing weatherization services will give residents a more affordable option to power air conditioners. The project is led by GRID Alternatives Greater Los Angeles (GRID Alternatives), a nonprofit that installs solar power systems and provides job training for underserved communities.

Recent Accomplishments*

- » Began cross-partner coordination activities to develop outreach plan
- » Identified local roofing subcontracts to complete cool roof installs

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Outreach Strategy

GRID Alternatives will use a layered approach to encourage widespread use of the project and ensure that the community is kept informed and engaged. GRID Alternatives will work close with Pacoima Beautiful and other Green Together partners to determine effective outreach efforts for the community, including hosting workshops, town halls, house parties, tabling at local monthly events, and participating in events at the TCC-funded Green Together Resource Center. This new community resource center will be a “hub” of information and activity encompassing all aspects of the TCC Project.

Economic Co-Benefits

The installation project is also part of Green Together’s Workforce Development Plan (WDP) activities to create a pipeline of green local jobs and a thriving workforce in the Northeast Valley. GRID will subcontract with local roofers, who will install a cool roof before solar installation by local resident trainees.

Cool Roof Retrofits

Project Details

- » **Launch date:** May 2020
- » **Anticipated completion date:** Ongoing
- » **Project lead:** GRID Alternatives
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$271,993

Cumulative Progress Through FY 2021-2022

- » Began cross-agency coordination activities

Responses to COVID-19

- » Due to COVID-19, GRID Alternatives reconfigured outreach strategies to meet public health guidelines.

Community Resiliency Center

San Fernando Gardens Public Housing, the future location of the Green Together Community Resiliency Center. Photo credit: Los Angeles Daily News

GREEN TOGETHER'S COMMUNITY RESILIENCY CENTER will be located at the San Fernando Gardens Los Angeles Public Housing Apartments. The building will be retrofitted with solar and storage systems that allow maintaining electricity during blackout events, providing safe harbor for residents to keep medicine cold, charge phones, and remain connected to families. The project will also serve as a cooling center during periods of extreme heat for at-risk populations such as seniors and families with small children. Extreme heat is an environmental burden facing Northeast Valley residents both outdoors as well as indoors as many homes lack proper ventilation and air conditioning. The existing public housing complex consists of 448 apartment units operated by Los Angeles Housing Authority. The project is led by GRID Alternatives Greater Los Angeles in coordination with other TCC projects.

Recent Accomplishments*

- » GRID Alternatives secured the relocation of community resiliency center to San Fernando Gardens Los Angeles Public Housing Apartments
- » GRID Alternatives is in the process of developing the design for the solar photovoltaic system, energy storage system, and electric vehicle charging stations

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Cross-cutting Project Approach

Building the Community Resiliency Center requires extensive cross-partner and cross-agency coordination, highlighting the extensive need for partnership building to successfully design, implement and maintain community serving projects to address climate change.

The Community Resiliency Center Project will be funded by rebate dollars from Green Together’s TCC-funded Residential Solar Photovoltaics Project. The Community Resiliency Center will also leverage Green Together’s Workforce Development Plan training activities. Participants in the trainings will install the solar systems on the housing complex.

As a result of this multifaceted cross-cutting project, the

Community Resiliency Center project will require coordination of at least seven organization and Green Together partners, including Pacoima Beautiful, the Los Angeles Housing Authority, and GRID Alternatives.

The cross-cutting renovation project will make the complex more useful to the community and more adaptable to the impacts of climate change. Specifically, Green Together’s Community Resiliency Center Project includes the following retrofits to the San Fernando Gardens Los Angeles Public Housing Apartments.

- » Free electric vehicle charging stations for 2-4 vehicles.
- » Renovation of San Fernando Gardens community center with 43kW solar photovoltaic and 45kW storage system.

Community Resiliency Center

Project Details

- » **Launch date:** June 2020
- » **Anticipated completion date:** Ongoing
- » **Project lead:** GRID Alternatives
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$271,660

Cumulative Progress Through FY 2021-2022

- » Conducted initial site visit at San Fernando Gardens Los Angeles Public Housing Apartments.
- » Entered costing and preliminary design stage.
- » GRID Alternatives is developing the design for the solar photovoltaic system, energy storage system, and electric vehicle charging stations.

Responses to COVID-19

- » Due to COVID-19, GRID Alternatives Greater Los Angeles reconfigured cross-agency and cross-partner collaborations to meet public health guidelines.

Bradley Green Alley and Plaza Renovation

A segment of Bradley Green Alley that was renovated through leveraged funds. Photo credit: Pacoima Beautiful

BRADLEY GREEN ALLEY AND PLAZA RENOVATION is an urban greening project that has transformed a 0.7 acres of a blighted 25-foot-wide alley and plaza into a community asset that yields multiple environmental and public health benefits. The project is in the heart of the Pacoima business district and adjacent to the San Fernando Gardens Public Housing Apartments. Project improvements include a stormwater capture system, shade structure, seating constructed out of locally sourced reclaimed lumber, shade trees, drought tolerant landscaping, and traffic calming design features. The project was initiated by Pacoima Beautiful and was led by the Trust for Public Land (TPL) and the Los Angeles Bureau of Sanitation (LASAN) in collaboration with multiple partners. The project supports multi-modal travel in the project area and contributes to LA’s water sustainability by supplementing local water supply efforts. The renovations are a decade in the making as the site was first identified in 2011 by the community as a flexible event space to meet the need for community gathering spaces.

Recent Accomplishments*

» Ribbon Cutting on October 22, 2020

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Green Together’s Bradley Green Alley project includes the following renovations to Bradley Green Alley and Plaza:

- » 800 feet of alley and street improvement;
- » 6 streetlights funded by the local city council, 5 seating fixtures from locally sourced lumber, 1 shade structure;
- » At least 1,000 drought-tolerant climbing vines and shrubs;
- » 46 new trees;
- » A stormwater capture system including catch basins, a dry well, infiltration trench, and infiltration planters to infiltrate up to 2M gallons, or 6 acre feet, per average rain year; and
- » A nature classroom, informal play areas, fitness equipment.

A Vision for a Greener Pacoima

The Bradley Green Alley and Plaza Renovation project was first envisioned by community during the development of Pacoima Urban Greening Vision Plan. The Vision Plan was made possible, in part, through an urban greening grant from the California Strategic Growth Council awarded to Pacoima Beautiful in 2011. The alley is one of the first “Shared Streets” in the City of Los Angeles designed to slow down traffic to create safe community gathering spaces while allowing for pedestrian and vehicle access.

Collaborative Implementation Approach

TPL managed design, construction, and overall project management. TPL partnered with a robust team to assist with outreach, post-construction monitoring, and maintenance. The team and roles include the following: Pacoima Beautiful was responsible for outreach and updating the community on project progress. LASAN was responsible for supporting the project design and implementation and conducting a post-implementation water quality monitoring. Other regional supporters include LA Waterkeeper and Liberty Hill Foundation.

After project completion, landscape and plant maintenance was conducted by the construction contractor for one year, ending April 2021. Since the maintenance contract ended, Pacoima Beautiful has supported the landscape maintenance.

The renovation of Bradley Green Alley and Plaza is another example of the extensive cross-partner collaboration needed to successfully design, implement and maintain community-driven projects that empowers them to choose their own goals, strategies, and projects to adapt to climate change.

Bradley Green Alley and Plaza Renovation

Project Details

- » **Launch date:** February 2019
- » **Completion date:** August 2021
- » **Project lead:** Trust for Public Land and Los Angeles Bureau of Sanitation
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$2,389,781

Cumulative Progress Through FY 2021-2022

- » Project was completed in fall 2020.

East San Fernando Valley Transit Corridor

Pacoima Beautiful community members performing First/Last Mile walk audits. Photo credit: CityWorks Design

THE EAST SAN FERNANDO VALLEY TRANSIT CORRIDOR is a long-term endeavor underway in the Northeast San Fernando Valley that will provide vital public transit infrastructure investments to the community. Anticipated to open for revenue service in 2028, this project will bring high-quality light rail transit service to improve mobility and access for residents of the Pacoima neighborhood and the Green Together project area. The project will also serve as a critical link between the busiest bus corridor in the Valley, the G Line (Orange) busway, two Metrolink lines, and the future Sepulveda Transit Corridor that will connect the San Fernando Valley to the Westside and, eventually, Los Angeles International Airport.

The project is led by the Los Angeles County Metropolitan Transportation Authority (Metro) in partnership with Pacoima Beautiful for community engagement activities that fall within the Green Together project area. The leveraged portion of the project includes engineering and design services for three of the light rail stations and first/last mile planning for five of the light rail stations to identify projects to enhance the experience for people as they walk, bike, or roll to the stations or nearby destinations.

Recent Accomplishments*

- » The First/Last Mile (FLM) plan was adopted in December 2020
- » Preliminary engineering is ongoing
- » Three stations overlap within the project area, these include: Paxton, Van Nuys/San Fernando, Laurel Canyon stations

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

The project works in concert with other Green Together TCC-funded projects. Collectively, the mobility improvements from these projects have the potential to boost economic development and improve social justice by facilitating access to regional amenities such as job centers, educational and health facilities, and other activity centers.

Specifically, leveraged project components for the East San Fernando Valley Transit Corridor will include the following:

- » Planning and design engineering for the East San Fernando Valley Light Rail Transit Project; which includes the TCC Green Together project area; and
- » First/Last Mile plans for several stations of the East San Fernando Valley Light Rail Transit Project, including the five planned stations in the TCC project area.

Collaborative Implementation Approach

The project will work with other Green Together low-carbon transportation projects, including the active transportation project, Pedestrian Mobility Improvements led by TPL. The Pedestrian Mobility Improvement project will

provide four mobility hub sites to address first-last mile connectivity to three planned Metro light rail stations that are part of the East San Fernando Valley Transit Corridor leveraged project, as well as the DASH E-bus TCC-funded project, and existing Metro local and rapid bus service stops. The hubs will include EV charging infrastructure, bike share infrastructure, bike parking, seating, way-finding signage, and public art as outlined in the Pedestrian Mobility Improvements project.

There are multiple mobility challenges within the Green Together project study area. The project areas is expected to see continued population growth that will increase demand for transit service along the Van Nuys Boulevard corridor, which already has high population density and persons who rely on transit for daily transportation, including commuting. The Green Together Network expects that the improved transit connectivity and increased service provided by these projects will increase transit ridership, which in turn could result in environmental benefits due to reduced vehicle trips, reductions in vehicle miles traveled, less roadway congestion, and improved air quality.

East San Fernando Valley Transit Corridor

Project Details

- » **Launch date:** December 2018
- » **Anticipated completion date:** 2028-2030
- » **Project lead:** LA Metro
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$13,160,646

Cumulative Progress Through FY 2021-2022

- » Received approval to hire contractor and start planning, design, and construction process for the transit corridor.
- » Launched planning efforts for the First/Last Mile Plans to improve transit riders' experiences walking and biking to planned stations.
- » Hosted or participated in 14 community events in the project area or nearby communities.
- » Held three walk audits in the half-mile area, one for each of the proposed stations, to identify key issues with roads and sidewalks.
- » 227 people provided commentary or input on the transit design.

Fernangeles Park Stormwater Capture

Fernangeles Park entrance sign. Photo credit: LAParks.org

FERNANGELES PARK STORMWATER CAPTURE project will install a 1.6-acre underground infiltration gallery in an existing City of Los Angeles Park. The multibenefit project will capture and infiltrate stormwater with the goals of reducing potential flooding, improve stormwater quality, increase water supplies through stormwater capture, and provide recreational, social, and economic benefits. The design of the project includes features that will allow capture of stormwater from the park and adjacent streets and will recharging the San Fernando Groundwater Basin. The project will install one catch basin, bioswales, and a variety of park improvements, some of which will be informed by the community. The site is in the Sun Valley Neighborhood in the southwest portion of the project area near the intersections of the I-5 freeway and State Highway 170. The project is led by the City of Los Angeles Department of Water and Power (LADWP), an agency responsible for providing the City of Los Angeles with a safe and reliable supply of water for a variety of uses.

Recent Accomplishments*

- » Completion of CEQA Mitigated Negative Declaration Documentation
- » 90% Design Submittal; awaiting key permits, clearances, and approvals for design completion
- » 3 meetings with key stakeholders in both English and Spanish

*Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Project implementation will include the following:

- » Planning and design engineering for 1.6-acre underground infiltration gallery;
- » Underground infiltration gallery sized to store approximately 703,000 cubic feet of water;
- » Design elements include catch basins, diversion structure(s), bioswales, hydrodynamic separator (HDS) units, flow measuring devices, supervisory control and data acquisition, educational signage, and park restoration/improvements;
- » Various green street improvements to Morehart Street, such as new pavements, sidewalks, curbs and gutters.
- » Park improvements will include upgrades to two baseball fields, including new dugouts, backstops, batting cages, benches, sports lighting, and irrigation systems. The remainder of park improvements will be refined during design based on community input.

Collaborative Implementation Approach

The City of Los Angeles is a part of a complex multijurisdictional region. As such, implementing effective and comprehensive local stormwater capture projects involves a collaborative effort between several agencies.

The Fernangeles Park Stormwater Capture leveraged project is part of the LADWP’s Stormwater Capture Master Plan that was completed and approved in 2015. The Master Plan was developed in close coordination with the Los Angeles County Flood Control District, the United States Bureau of Reclamation (USBR) Basin Study, and LASAN’s Enhanced Watershed Management Plans (EWMPs). The project also cooperated with the Mayor’s Sustainable City pLAn and the City’s 2015 Urban Water Management Plan.

The LADWP will work in close coordination with the City of Los Angeles Department of Recreation and Parks, Pacoima Beautiful, the City of Los Angeles Council District 7, Los Angeles Department of Public Works, Los Angeles Department of Transportation, and the California Department of Transportation and other partners working in the Northeast San Fernando Valley.

Fernangeles Park Stormwater Capture

Project Details

- » **Launch date:** May 2019
- » **Anticipated completion date:** November 2023
- » **Project lead:** LA Department of Water and Power
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$8,426,000

Cumulative Progress Through FY 2021-2022

- » Completed CEQA Mitigated Negative Declaration Documentation
- » 90% Design Submittal
- » Initial Draft 100% design package obtained
- » Completed draft geotechnical report
- » About 360 residential and commercial properties visited through door-to-door outreach.

Responses to COVID-19

- » COVID-19 delayed in-person outreach events.

Green Streets

Concept green street envisioned as part of the Pacoima Urban Greening Plan that laid groundwork for TCC. Photo credit: LA Más

THE VAN NUYS-GLENOAKS GREEN STREETS PROJECT is a storm-water management approach that incorporates vegetation, soil, and engineered systems to slow, filter, and clean urban runoff from impervious surfaces. The project focuses on two streets in the Pacoima neighborhood of the project area and takes a distributed approach by installing green stormwater infrastructure at various locations surrounding a part of the neighborhood. This project is a joint partnership between the City of Los Angeles Sanitation’s (LASAN) Watershed Protection Division and the Department of Water and Power (LADWP). The project works in concert with the Green Together’s TCC-funded Street Planting project led by the Los Angeles Conservation Corps and youth training component of the Workforce Development Plan (WDP). The project supports regional efforts to increase the local water supply and meeting the city’s water quality standards by removing pollutants. Other project benefits include recharging the San Fernando Groundwater Basin and reduction in localized flooding.

Recent Accomplishments*

» Construction began on September 21, 2020, and completed on March 31, 2021

* Includes accomplishments only during the last fiscal year (July 2021 through June 2022)

Specifically, the Van Nuys-Glenoaks Green Streets project implements the following:

- » Two types of green stormwater infrastructure systems, a bioswale for water pretreatment and a dry well infiltration system;
- » Other design features including curb inlets, vegetation, and a porous concrete gutter;
- » An average yearly capture rate for the combined green street projects of 95 acre-feet per year.

In addition to the stormwater capture improvements, the project also includes street tree plantings to help shade and cool the streets and sidewalks and increase pedestrian comfort. This is an important feature as the already warm area is expected to experience an increase in extreme heat days in the coming decades. Together, these project components capture stormwater and urban runoff from a combined 100-acre watershed, bringing the benefits of urban greening to a disadvantaged community that has a long history of neglect.

Collaborative Implementation Approach

The planning for this work was initiated by Pacoima Beautiful years ago with the Pacoima Wash Vision Plan in 2008, and most recently with the Pacoima Urban Greening Vision Plan in 2015. LASAN managed the design and implementation of the Van Nuys-Glenoaks Green Streets project. LASAN worked closely with community partners including Pacoima Beautiful to ensure that the project meets community needs for greening, beautification, and more shade in the Northeast Valley while also capturing and cleaning stormwater.

The Green Together network and Pacoima Beautiful supported the project with outreach to help raise awareness of the green street projects in the community. LASAN hired the construction contractor to build the improvements. The Los Angeles Conservation Corps planted all the street trees as part of the Green Together Street Tree Planting project, providing training opportunities for youth.

Van Nuys-Glenoaks Green Streets Project

Project Details

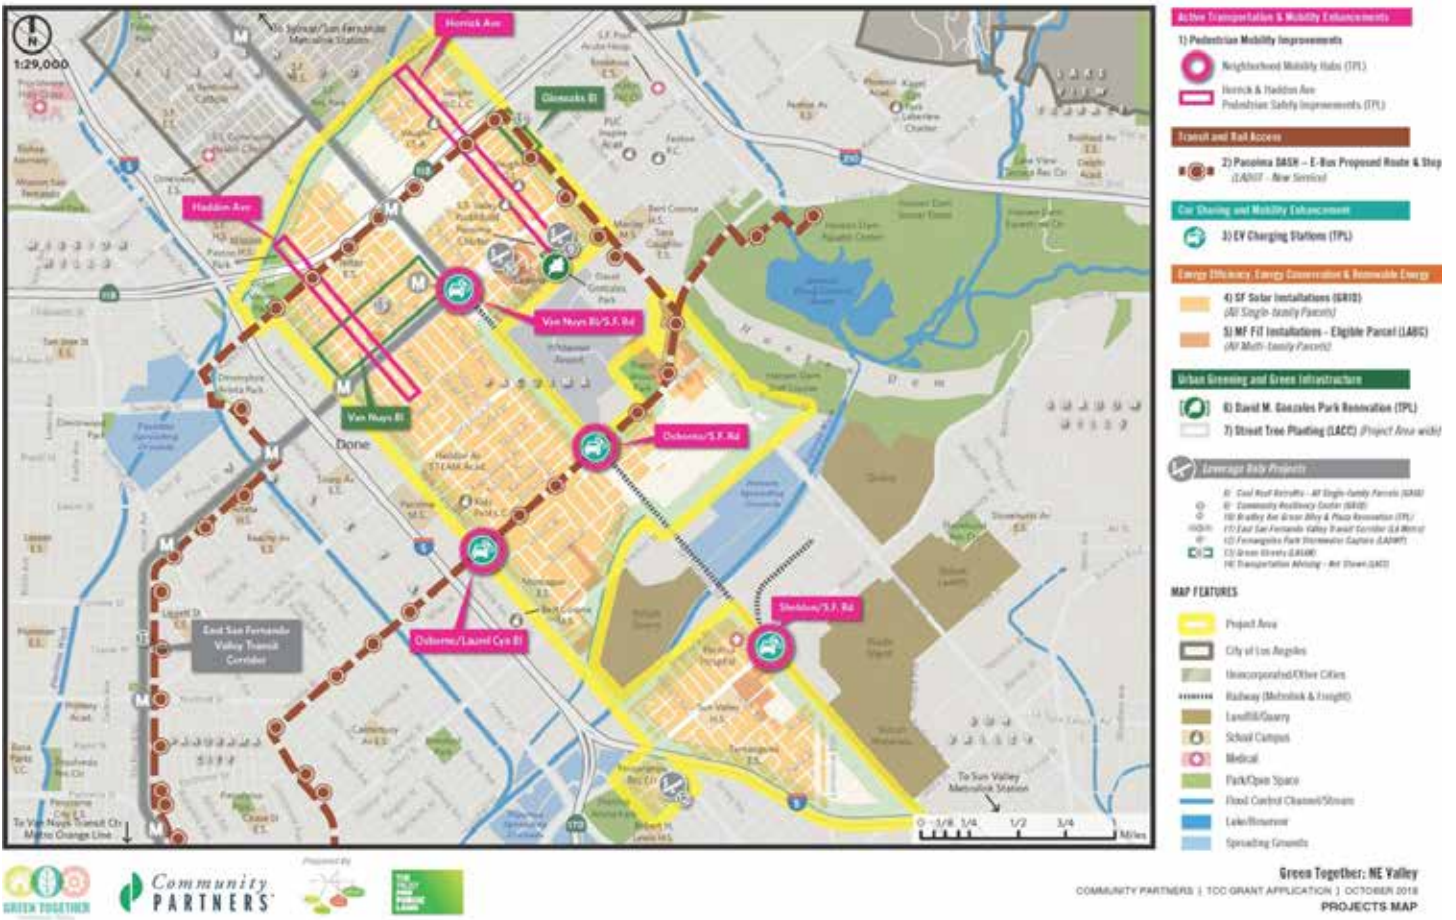

- » **Launch date:** November 2019
- » **Completion date:** March 2021
- » **Project leads:** Los Angeles Bureau of Sanitation and LA Department of Water and Power
- » **TCC grant funds:** \$0
- » **Leveraged funds:** \$3,665,000

Cumulative Progress Through FY 2021-2022

- » Project was completed in spring 2021.

Appendix 2: Summary of Methods for Estimating Project Benefits

Benefit	Methodology	Version	Revision Date
Avoided stormwater runoff	iTree Planting	1.1.3	N/A
Energy cost savings	California Air Resources Board (CARB) Co-benefit Assessment Methodology for Energy and Fuel Cost Savings*	N/A	9/13/2019
Greenhouse gas (GHG)-reductions	CARB Quantification Methodology (QM): Active Transportation Program	FY 2017-18	N/A
	CARB QM: Low Carbon Transit Operations Program	FY 2017-18	1/2/2018
	CARB QM: Low-Income Weatherization Program	FY 2015-16	11/14/2016
	CARB QM: Urban and Community Forestry Program	FY 2017-18	3/20/2018
Jobs (direct, indirect, induced)	Job Co-benefit Assessment Methodology	N/A	1/31/2020
Renewable energy generation	CARB QM: Low-Income Weatherization Program	FY 2015-16	11/14/2016
Travel cost savings	CARB Co-benefit Assessment Methodology for Travel Cost Savings	N/A	10/18/2019
Vehicle miles traveled (VMT) reductions	CARB QM: Active Transportation Program	FY 2017-18	N/A
	CARB QM: Low Carbon Transit Operations Program	FY 2017-18	1/2/2018

* CARB’s energy and fuel cost savings methodology does not provide an explicit example of how to calculate cost savings from urban forestry and greening projects. Nonetheless, CARB’s methodology does provide a basic framework for estimating cost savings from any project that achieves energy use reductions: (energy cost savings = net decline in energy use X per unit cost of energy). Thus, for urban forestry and urban greening projects, the UCLA-UCB evaluation team estimated energy cost savings by taking two outputs from iTree (annual electricity savings and annual natural gas savings) and multiplying these outputs by their per unit cost (as based on cost assumptions from Appendix A of CARB’s energy cost savings methodology). The evaluation team then scaled up these costs by 40 years and prorated them according to the percentage of trees that actually shade buildings (and therefore have a meaningful impact on electricity and gas use).

Appendix 3: Green Together Stakeholder Structure

Steering Committee

Member	Membership Type

* MOEs for the county and the state are obtained directly from the U.S. Census Bureau. MOEs for TCC and control census tracts are derived by the UCLA Luskin Center for Innovation (LCI) in accordance with the methods described by the U.S. Census Bureau in *Understanding and Using American Community Survey Data: What All Data Users Need to Know* (2018). All MOEs are reported at the 90% confidence interval.

* Collision data were obtained from the Transportation Injury Mapping System (TIMS). The numbers presented here are conservative in that they do not include collisions that were missing geographic coordinates in TIMS. Street mileage was obtained from OpenStreetsMap (OSM) and totaled 129 miles for the project area and 470 miles for the control tracts. Vehicle collisions involving bicycles and pedestrians are not mutually exclusive because some accidents may involve both modes.

*MOEs for the county and the state are obtained directly from the U.S. Census Bureau. MOEs for TCC and control census tracts are derived by LCI in accordance with the methods described by the U.S. Census Bureau in *Understanding and Using American Community Survey Data: What All Data Users Need to Know* (2018). All MOEs are reported at the 90% confidence interval.

*MOEs for the county and the state are obtained directly from the U.S. Census Bureau. MOEs for TCC and control census tracts are derived by LCI in accordance with the methods described by the U.S. Census Bureau in *Understanding and Using American Community Survey Data: What All Data Users Need to Know* (2018). All MOEs are reported at the 90% confidence interval.

* Charging station data were obtained by request from the Alternative Fuels Data Center (AFDC), a resource administered by the U.S. Department of Energy's Office of Energy Efficiency and Renewable Energy's Vehicle Technologies Office. Each dataset includes active stations and does not include stations that have previously opened and closed. In other words, each dataset is a snapshot of currently active stations in that year (taken during fall of each year). The charging station data were normalized with five-year ACS data for the respective year.
